

Academic Program Description Form

2026-2025

University Name: Al-Rafidain University

Faculty/Institute: College of Engineering and Engineering Techniques

Scientific Department: Mechanical Power Techniques Engineering-
Refrigeration and Air Conditioning.

Academic or Professional Program Name: B.Sc. Mechanical Power
Techniques Engineering- Refrigeration and Air Conditioning.

Final Certificate Name: B.Sc in Mechanical Power Techniques Engineering-
Refrigeration and Air Conditioning.

Academic System: Bologna

Description Preparation Date:

File Completion Date: 1-10-2025

Signature: 

Head of Department Name:

Ass. Prof. Dr. Mohammed Ali Mahmood

Date: 2-10-2025

Signature: 

Scientific Associate Name:

Dr. Hashim Raed Hashim

Date: 2-10-2025

The file is checked by:

Department of Quality Assurance and

University Performance

Director of the Quality Assurance and University Performance Department:

Dr. Hashim Raed Hashim

Date: 2-10-2025

Signature: 

Approval of the Dean

Prof. Dr. Wajeeh Kamal Hasan

Vision

The Department of Power Mechanical Techniques Engineering, Refrigeration and Air Conditioning branch aspires to be a distinguished leader among mechanical engineering departments in both public and private colleges and universities. We aim to achieve this by strengthening scientific and administrative partnerships to ensure the graduation of an engineering workforce that meets the core technical and knowledge requirements within Iraq and globally.

Mission

To provide students with fundamental theoretical and practical engineering concepts in the field of air conditioning and refrigeration, utilizing advanced educational methods and modern laboratories. This is integrated with field training in both public and private sectors to qualify graduates to serve the nation and contribute effectively to its progress.

Goals:

The primary objectives of the department are categorized as follows:

1. **Technical & Academic Qualification:** Preparing and graduating an engineering cadre that fulfills key technical and cognitive requirements, serving as high-quality human resources in the refrigeration and air conditioning field.
2. **Training & Market Readiness:** Organizing specialized training and rehabilitation courses led by competent staff, with active student participation to ensure seamless integration into the labor market.
3. **Strategic Partnerships:** Strengthening scientific and administrative ties with peer engineering colleges, industrial companies, and relevant institutions to address training needs, rehabilitation, and curriculum development.
4. **Community Engagement & Field Training:** Maintaining social contributions and research initiatives to ensure the highest levels of student understanding through summer training programs and post-graduation follow-ups.

5. Continuous Improvement: Developing and implementing all necessary scientific and administrative plans and curricula required to achieve the aforementioned goals in accordance with quality standards.
6. Qualifying qualified graduates to be applied technical engineers capable of preparing all designs for air conditioning, refrigeration, and freezing systems of all kinds, to be able to implement and supervise the installation of air conditioning systems of all kinds.
7. Preparing graduates familiar with applied industrial experiences through the introduction of modern technological means in the curriculum.

Preparation of detailed study plans:

The department has a guide to describe the academic program of the scientific department that contains all the approved curricula that are taught for preliminary studies, as this guide is updated annually with a commitment to the update rate specified by the ministry by no more than 20%. This guide is announced on the website where the university provides the necessary sources of methodological books for the success of the teaching process according to the curriculum. The curricula are also followed up and completed according to special forms adopted for this purpose, where these forms are required at the end of each semester to be analyzed, studied, and diagnosed with the most important problems to avoid them in the following year, and they are also available in English and Arabic.

Data archiving:

An organized mechanism is followed to archive all documents related to the implementation of the educational program, including study plans, student projects, exam results, and follow-up reports, through cloud storage and university servers.

Data collection:

A satisfaction survey is conducted, and data on student performance are collected, such as exam results, pass rates, and students' reactions to the curriculum.

Students are eligible to the Department of Power Mechanical Techniques Engineering, Refrigeration and Air Conditioning branch - College of Engineering and engineering techniques according to a central admission process called (grades comparison) managed by the Iraqi

Ministry of Higher Education and Scientific Research / Studies, Planning, and Prosecution Office / Central Admission Department.

An applicant for admission to an undergraduate program at the Department of Power Mechanical Techniques Engineering, Refrigeration and Air Conditioning branch must satisfy the following minimum requirements:

1. He should have an Iraqi secondary school certificate, or its equivalent.
2. The number of students accepted is limited to the number of seats available as decided by the Deanship of the college.
3. The applicant must submit the required documents to the Admission office within a specified period.
4. An applicant who has graduated from a secondary school system outside Iraq must have completed twelve years of combined primary and secondary school studies at a recognized school. He is also required to provide an equivalency certificate from the Ministry of Education, Iraq. In addition, he is required to take the aptitude and subject tests.

The number of the newly enrolled students in the Department of Power Mechanical Techniques Engineering, Refrigeration and Air Conditioning branch for the academic year 2025-2026 was 97 students.

Evaluation of student performance

Like all other programs at the College of Engineering and engineering techniques, the program in the Department of Power Mechanical Techniques Engineering, Refrigeration and Air Conditioning branch follows two systems. First system -Each academic year consists mainly of two semesters, and each semester has a duration of 15 weeks. The program is a four-year program, and the second system is the Bologna system consist of 15 weeks in each semester for 8 semesters or 240 ECTS for the program.

Examination and grading system:

The examination and grading system of the program is governed by the following regulations:

- 1- Success in a course depends on the student's performance in coursework and the final exam. A combined final letter grade must be assigned to the student at the end of the semester.
- 2- The total grade points for a course are 100. These points are allocated among different activities like assignments, quizzes, midterms, laboratory reports, report writings and exams.

Generally, the final exam and midterms have 50% and 10% weightage, respectively, out of the total 100%.

3- The passing grade for each course is 50% out of a total 100%.

The program grading system mainly follows the requirements of the Department of Power Mechanical Techniques Engineering, Refrigeration and Air Conditioning branch, as listed in Table 1.1.

Table 1.1 Grading system at the Department of Power Mechanical Techniques Engineering, Refrigeration and Air Conditioning branch

Marks	Rating
90 – 100	Excellent
80 – < 90	Very good
70 – < 80	Good
60 – < 70	Fair
50 – < 60	Pass
< 50	Fail

The total final average of a student in a specific semester is determined by dividing the cumulative marks multiplied by the credit-hours (units) of all the registered courses in that semester by the total credit-hours (units) of those courses.

The student's graduation average is calculated at the end of the program as shown in Table 1.2.

Table 1.2: A percentage of the yearly average

Academic year	Percentage of yearly average
1st year	10%
2nd year	20%
3rd year	30%

4th year	40%
Total	100%

Program outcomes are narrower statements that describe what students are expected to know and be able to do by the time of graduation. These relate to the skills, knowledge, and behaviors that students acquire in their matriculation through the program.

Assessment under this criterion is one or more processes that identify, collect, and prepare data to evaluate the achievement of program outcomes.

Evaluation under this criterion is one or more processes for interpreting the data and evidence accumulated through assessment practices. Evaluation determines the extent to which program outcomes are being achieved, and results in decisions and actions to improve the program. Below are the results of the technological engineering programs specified in the standards for accreditation of technological engineering programs according to the NCPAETE, Guidebook, page 12, first edition – 2020, which states that after completing the requirements of the prepared program, the student will be able to:

- A. Selects and applies modern knowledge, techniques, skills, and devices in large-scale engineering activities.
- B. Selects and applies knowledge of mathematics, engineering, technology, and other sciences to solve engineering problems that require the application of applied principles, procedures, or methodologies.
- C. Conducts the required tests, experiments, and measurements, analyzes and interprets their results, and applies experimental results to improve engineering processes.
- D. Designs systems, components, or processes for large-scale engineering problems that fit the objectives of the educational program.
- E. Works effectively as a member or leader of a specialized engineering team.
- F. Identifies, analyzes, and solves large-scale engineering problems.
- g. Identify and utilize appropriate technical literature as well as apply written documents, oral communications, and graphics in both technical and non-technical environments.
- h. Participates in self-directed continuing professional development.

- i. Works to understand and adhere to professional and ethical responsibilities.
- j. He works to understand the impact of solutions to engineering problems locally and globally and applies them in his field of specialization.
- k. Adheres to quality concepts and seeks continuous improvement.

Process for the Establishment and Revision of the Student Outcomes

The program outcomes were originally developed by faculty members and debated during the faculty meetings as well as the MPAC Advisory Board meeting. Our faculty also mapped the program outcomes to the NCPAETE Criterion (a) through (k) and grouped them to achieve each program Educational Objective discussed in CRITERION 2. The process of establishing and revising the Program Outcomes is similar to the processes elaborated upon for the Educational Objectives in CRITERION 2, Process for Establishing Program Educational Objectives, which consists of both internal and external review processes involving significant inputs from the program constituents.

Student Outcomes

According to Criterion 3, the Mechanical Power Engineering / Air Conditioning and Refrigeration Engineering Education Program Outcomes are statements that describe what students are expected to know and what they are expected to do by the time they graduate. These data or skills must enhance the achievement of the educational objectives of the academic program of the Department of Mechanical Power Engineering / Air Conditioning and Refrigeration Engineering, Criterion 2. The skills acquired from the stated results must enhance the achievement of the educational objectives of the educational program of the Department, which are as follows:

1. Expected learning outcomes of the program	
Knowledge and understanding	
A1	Ability to apply knowledge in mathematics, science, and engineering.
A2	Understand the professional and ethical responsibilities of the field of specialization.

A3	Ability to evaluate course outcomes with faculty, industry, and professional practitioners, as well as employers and graduate students, to improve them
A4	Teaching leadership skills and the value of quality commitment, ethical behavior, and respect for others
Subject-specific skills	
B1	Ability to work and integrate into multidisciplinary teams
B2	Ability to design and conduct experiments as well as analyze and interpret data.
B3	The ability to use modern techniques, engineering skills, and tools to practice engineering.
B4	Ability to identify and formulate engineering problems in the field of specialization
thinking skills	
C1	The ability to communicate effectively with those concerned with the field of specialization on both the civil and military sides
C2	Recognizing the need and ability to engage in lifelong learning.
C3	Knowledge of contemporary issues in the field of specialization
C4	Broad learning is necessary to understand the impact of engineering solutions on global economic, environmental, and social problems.
Generic and transferable skills (other skills related to employability and personal development)	
D1	Ability to manage and work with refrigeration and air conditioning equipment
D2	The ability to design air conditioning systems and use simulation programs, which is a process to meet the required needs within the field of specialization in a realistic framework that imposes environmental, economic, social, political, and health restrictions.....
D3	The ability to work with the latest devices for diagnosing mechanical, electrical, and electronic faults in refrigeration and air conditioning systems
D4	The ability to adapt to similar specializations (power generation engineering, manufacturing engineering, renewable energies, and so on)

Mapping of Student Outcomes to Criterion 3 Requirements for Student Outcomes

Relation of MPAC Program Outcomes to NCPAETE Program Outcomes

The above outcomes are closely related to the NCPAETE educational outcomes (a through k) as can be seen in Table 3.1. As shown in Table 3.1, each NCPAETE Educational Outcome is related to at least one ATU Program Outcome defined for the Mechanical Power Engineering / Air Conditioning and Refrigeration Engineering program.

Independent verification of standards

Table 3.2 shows the Mechanical Power Engineering / Air Conditioning and Refrigeration Engineering Department's work to verify the results of the self-evaluation processes of performance quality, by examining their evidence and evidence, including feedback through questionnaires and the opinions of stakeholders and beneficiaries such as students, teachers, graduates, and employers within the improvement processes.

Achievement of Program Outcomes:

The linkage between the program Educational Objectives (PEOs) and the Graduate Outcomes (GOs) is shown in Table 3-3. The achievement of the Graduate Outcomes (GOs) ensures that our graduates are well-equipped to achieve the Program Educational Objectives in actual practice following graduation. The curriculum of MPAC ensures that students:

1. Provide graduates a strong foundation in mathematics, science, and engineering science in addition to the analysis and design of refrigeration and air conditioning systems.
2. Provide graduates with the ability to identify and solve engineering problems as well as the ability to design and conduct laboratory experiments in fluid mechanics, thermodynamics, heat transfer, air conditioning, and refrigeration.
3. Enable them to contribute effectively to serve their community and raise the level of and submit their profession.

4. Prepare graduates to engage in lifelong learning, as well as achieve success in their careers and professional development.

5. Prepare graduates to learn the ethics of the profession and knowledge of contemporary issues and their influence on society.

Table 3.1: Linking the educational program outcomes according to the general standards of NCPAETE to the academic program outcomes of the Mechanical Power Engineering / Air Conditioning and Refrigeration Engineering Department.

Program Structure and Content

Study Plan

Complete Table below that describes the plan of study for students in this program including information on course offerings in the form of a recommended schedule by year and term along with maximum section enrollments for all courses in the program for the last two terms the course was taught. If there is more than one curricular path or option for a program, a separate Table should be provided for each path or option. State whether the institution operates on semesters or quarters.

Alignment with PEOs

Describe how the curriculum aligns with the program educational objectives.

Through the provision of specialized engineering educational programs with the knowledge of environmental engineering for undergraduate and provide excellent learning environment so that it has recognized graduates high professional experience and basic engineering education to enable them to contribute effectively to serve their community and raise the level of and submit their profession.

Attainment of GOs

Describe how the curriculum and its associated prerequisite structure support the attainment of the graduate outcomes.

The scientific department as attached to graduate project student after completing the four stages successfully and after evaluation during the academic years of commitment to attendance and good conduct then the department send his biography school with his grades are installed in the card Biography study also includes details on the average of the final sequence on the session to the Registration unit in the university which holds the mechanism of issuing official documents for the students according to the context of the administrative system.

Prerequisite Structure

Attach a flowchart or worksheet that illustrates the prerequisite structure of the program's required courses

Subject Areas Requirements

Describe how the program meets the requirements in terms of hours and depth of study for each subject area (Math and Basic Sciences, Engineering Topics, and General Education) specifically addressed by the National Accreditation Criteria.

Developing the leadership capabilities for staff and students and the laying of the possibilities of self-education, induction and conclusion so that he has the talent in the field of Refrigeration and Air Conditioning engineering work on direct service to the community and reliable manner.

Major Design Experience

Describe the major design experience that prepares students for engineering practice and how this experience is based upon the knowledge and skills acquired in earlier coursework showing how it incorporate appropriate engineering standards and multiple design constraints.

Nowhere is this issue through the material summer training prescribed in the third phase of the students in the Department of Power Mechanical Techniques Engineering, Refrigeration and Air Conditioning branch, as are organized through the Committee on summer training, which is coordinating the distribution of students on the relevant departments competence of the scientific department and then it is administrative work and correspondence to other government departments for obtaining approval to accept students and send scorecards and then subject the student to the supervision by the teaching staff during the training period and provides the student finally a detailed report on business exerted during summer training and is taken up evaluation sent by the Department of student Training and Activity summer training is a good chance for students to take advantage of practical competence in the future.

Teaching and Learning Strategies

Describe the teaching, learning and assessment strategies used to guarantee that the students acquire the graduate outcomes. Describe the materials (course syllabi, textbooks, sample student work, etc.), that will be available for review during the campus visit to demonstrate achievement related to this criterion.

Curriculum developed in the department according to agreed standards with regard to Department of Power Mechanical Techniques Engineering, Refrigeration and Air Conditioning branch curriculum that promotes the acquisition of student competence in environmental science and approach would facilitate the learning outcomes.

College or department placed the curriculum and learning outcomes, education and placed in the basic criteria when you create the partition and there is no large gaps or interventions.

Relating Courses Learning Outcomes to GOs

Describe how the courses learning outcomes actually lead to the achievement of the graduate outcomes showing the relationships of courses to GOs. A —Course Portfolio for each course should be presented during the campus visit.

The curriculum is subject to audit and review of the Scientific Committee in the department and the Committee on modernizing curricula and the process is ongoing and continuous.

Possible to verify learning outcomes in a number of ways, including:

- The results of students and levels of success and failure rates
- Engineering and research projects submitted by students
- Scientific reports on the practical lessons and level.
- The results of the evaluation Summer Training.

The specialization of Department of Power Mechanical Techniques Engineering, Refrigeration and Air Conditioning branch is one of the main axes in the process of economic and industrial development of countries, including the services and qualification of engineers and a link between science and industry, it is concerned with air conditioning and refrigeration technology, through which materials are cooled in multiple ways through refrigeration devices by following modern industrial and scientific engineering concepts. The specialization of air conditioning and refrigeration engineering is keen on the economic aspect of industrial projects and strict adherence to the technical and environmental specifications of the production process. And to strengthen the students' connection with the scientific and technological development that our world is witnessing today. The importance and necessity of identifying these fields came from the development of modern society at the level of cultural life.

From this standpoint, the Department of Power Mechanical Techniques Engineering, Refrigeration and Air Conditioning branch was established at the Faculty of Engineering and engineering techniques- Al-Rafidain University in 2005/2006 and the leadership team in the department has been working and is still working on developing the educational program and ensuring its quality, continuity and success in the long term and providing the industrial sector to

cover the country's growing need for engineers with engineering staff to contribute to the comprehensive development of the country. The department also opened the evening study to open the way for some energies of technical diploma holders or employees to develop their ability to obtain an engineering certificate.

Here is the administration department structure:

Department of Power Mechanical Techniques Engineering, Refrigeration and Air Conditioning branch program in 8 semesters based on bologna process.

Semester 1 | 30 ECTS | 1 ECTS = 30 hrs

Code	Module	SSWL	USSWL	ECTS	Type	Pre-request
MPAC100	Mathematics	87	153	240	8.00

Department of Power Mechanical Techniques Engineering, Refrigeration and Air Conditioning
branch faculty members CV

Name: Prof. Dr. Wajeeh Kamal Hasan

1. Education:

1. Bachelor of Mechanical Engineering - College of Engineering - Department of Mechanical Engineering - University of Baghdad - 1992 - with a good grade.
2. Master of Mechanical Engineering - Specialization in Fluid Dynamics - Department of Machinery and Equipment Engineering - University of Technology - 1999 - Grade Very Good.
3. PhD in Mechanical Engineering - Specialization in thermal engineering - Department of Machinery and Equipment Engineering - University of Technology - 2006 - Grade Very Good

2. Academic Experience:

- Teaching at the College of Engineering - University of Kufa – 2001
- Experience in mechanical designs using the ACAD program
- Experience in using computer programs (excel, word, power point, Google classroom, Google forms)
- Teaching at Al-Rafidain University College - Department of Refrigeration and Air Conditioning Techniques Engineering - from 2006 until now
- Dean of the college of engineering and engineering techniques
- Head of civil engineering department
- Head of Department of Mechanical Power Techniques Engineering , Refrigeration and Air Conditioning Branch

3. Non-Academic Experience:

None

4. Certifications or Professional Registrations:

- Iraqi Engineers Syndicate
- Iraqi Teachers Syndicate

5. Current Membership in Professional Organizations:

- Iraqi Engineers Syndicate
- Iraqi Teachers Syndicate

6. Honors and Awards:

- a. Thanks and appreciation from the College Council as a member of the examination committee for the first and second rounds.
- b. Thanks and appreciation from the College Council for obtaining a high annual evaluation.
- c. Certificates of appreciation and participation in college festivals for graduation projects.
- d. Certificate of participation in scientific seminars of the college.
- e. Thanks and appreciation from the Presidency of Al-Mustansiriya University for obtaining the title of Assistant Professor.

7. Principal Publications and Presentations of Past Five Years

- 1) Enhancing Thermal Efficiency in Solar Water Heaters: The Role of Reflective Walls
- 2) Enhancing Thermal Efficiency in Solar Water Heaters Using Reflective Mirrors
- 3) Thermal Stratification Enhancement Using a Curved Baffle in Thermal Storage Tanks
- 4) Numerical Implementation of Direct and Reverse Flow for Plate Heat Exchanger
- 5) CFD Evaluation of Air Conditioning on the Distribution and Dispersion of COVID-19 Virus in a Room
- 6) IDENTIFYING THE EFFECT OF CHANNEL WALL RIPPLE HEIGHT ON MULTIPHASE FLOW
- 7) Two-Way Fluid-structure Interaction Study of Twisted Tape Insert in a Circular Tube Having Integral Fins with Nanofluid
- 8) Combined convection of CuO-H₂O nanofluid in Arc-shape annuli with moving flat top wall
- 9) Numerical investigation of nanofluid in a rectangular microchannel heat sink

8. Service Activities:

University:

University council member

College:

- 1) Dean of the college of engineering and engineering techniques
- 2) Head of civil engineering department
- 3) Member of the central examination committee

9. Professional Development Activities:

1. A course in wind tunnel tests for two months
2. Three-month course in Computational Fluid Dynamics (CFD)
3. A course in programming language (modula2) for a month
4. Computerized competence course
5. A course in teaching methods
6. A course in (power point)

7. A course in the program (Google classroom)
8. ACAD course

2- Name: Ass. Prof. Dr. Mohammed Ali Mahmood Hussein

1. Education:

1. Bachelor of Mechanical Engineering - College of Engineering - Department of Mechanical Engineering - University of Baghdad - 1993 - with a good grade.
2. Master of Mechanical Engineering - Specialization in Heat transfer - Department of Machinery – Collage of Military Engineering - 1999 - Grade Very Good.
3. PhD in Mechanical Engineering - Specialization in thermal engineering - Department of Machinery and Equipment Engineering - University of Technology - 2006 - Grade Very Good

2. Academic Experience:

- Teaching at the Al-Rafidain University Collage , Department of Power Mechanical Techniques Engineering from 2007-until now
- Experience in mechanical designs using the ACAD program
- Experience in using computer programs (excel, word, power point, Google classroom, Google forms)

3. Non-Academic Experience:

None

4. Certifications or Professional Registrations:

- Iraqi Engineers Syndicate
- Iraqi Teachers Syndicate

5. Current Membership in Professional Organizations:

- Iraqi Engineers Syndicate
- Iraqi Teachers Syndicate

6. Honors and Awards:

- a. Thanks and appreciation from the College Council as a member of the examination committee for the first and second rounds.
- b. Thanks and appreciation from the College Council for obtaining a high annual evaluation.
- c. Certificates of appreciation and participation in college festivals for graduation projects.
- d. Certificate of participation in scientific seminars of the college.
- e. Thanks and appreciation from the Presidency of Al-Mustansiriya University for obtaining the title of Assistant Professor.

7. Principal Publications and Presentations of Past Five Years

- 1) Mixed convection around a circular cylinder in a buoyancy-opposing flow

- 2) Temperature-dependent mechanical properties of Al/Cu nanocomposites under tensile loading via molecular dynamics method
- 3) Novel ecofriendly corrosion inhibition of mild steel in strong acid environment: Adsorption studies and thermal effects
- 4) Numerical Implementation of Direct and Reverse Flow for Plate Heat Exchanger
- 5) Experimental investigation of thermal performance and climatological parameters for trough parabolic collector with manual tracking system
- 6) IDENTIFYING THE EFFECT OF CHANNEL WALL RIPPLE HEIGHT ON MULTIPHASE FLOW
- 7) Natural convection heat transfer in a concentric annulus vertical cylinders embedded with porous media
- 8) Adsorption, temperature and corrosion inhibition studies of a coumarin derivatives corrosion inhibitor for mild steel in acidic medium: gravimetric and theoretical investigations
- 9) Numerical Investigation of Free Convection Heat Transfer from Two-Dimensional Rectangular Enclosure with Discrete Isothermal Heating from Bottom Side
- 10) The Influence of Water Temperature Change on Static Pressure in a Centrifugal Pump
- 11) Optimizing Tilt Angle for Thermal Efficiency of Vacuum Tube Solar Collectors
- 12) Analysis of thermoelastic damping in a microbeam following a modified strain gradient theory and the Moore-Gibson-Thompson heat equation

8. Service Activities:

University:

None

College:

- 4) Member of the Scientific Promotions Committee
- 5) Editorial Manager OF Al-Rafidain Journal of Engineering Sciences (RJES)

9. Professional Development Activities:

9. A course on Good Laboratory Practice based according to criteria of OECD on Testing and Calibration
10. A course on Documentation of quality manual and procedures based on ISO9001 and ISO10013
11. A course in the GLP
12. A course in the programming language (modula2) for one month
13. Computerized competence course
14. A course in teaching methods

15. A course in (power point)
16. A course in the program (Google classroom)

3-

Name: Assistant. Lect. Ali Najim Abdullah

1. Education:

1. Bachelor of Mechanical Engineering - - Department of Mechanical Engineering - Specialization in Refrigeration And Air Conditioning, University of Technology - 1999 - with a good grade.
2. Master of Mechanical Engineering - Specialization in Refrigeration and Air Conditioning, University of Technology - 1999 - with a good grade.

2. Academic Experience:

- Engineer- Ministry of Science and Technology 2003-2009
- Experience in mechanical designs using the ACAD program
- Experience in using computer programs (excel, word, power point, Google classroom, Google forms)
- Teaching at Al-Rafidain University College - Department of Refrigeration and Air Conditioning Techniques Engineering - from 2009 until now

3. Non-Academic Experience:

None

4. Certifications or Professional Registrations:

- Iraqi Engineers Syndicate
- Iraqi Teachers Syndicate

5. Current Membership in Professional Organizations:

- Iraqi Engineers Syndicate
- Iraqi Teachers Syndicate

6. Honors and Awards:

- a. Thanks and appreciation from the College Council as a member of the examination committee for the first and second rounds.
- b. Thanks and appreciation from the College Council for obtaining a high annual evaluation.
- c. Certificates of appreciation and participation in college festivals for graduation projects.
- d. Certificate of participation in scientific seminars of the college.

7. Principal Publications and Presentations of Past Five Years

1) A Technical and Economic Feasibility Study for on-Grid Solar PV in Libya.

2) Platinum-free counter electrode based on $\text{ZnCo}_2\text{O}_4/\text{NiO}$ core-shell nanostructures in dye-sensitized solar cells.

3) Nanomaterials and Phase-Changing Materials in a U Vacuum Tube Solar Collector.

4) DESIGN AND PERFORMANCE STUDY OF A DUAL-AXIS SOLAR TRACKER SYSTEM FOR THE CLIMATE OF EASTERN LIBYA.

5) IDENTIFYING OF THE EFFECT OF THE NUMBER OF TESLA FUSES IN A COILED COLLECTOR ON DIRECT AND REVERSE HEAT TRANSFER.

6) Numerical investigations of multiphase pool boiling in micro-channels with several cooling materials

8. Service Activities:

College:

1) Rapporteur of the mechanical power technology department

2) Member of the Sub-Examinations Committee

9. Professional Development Activities:

17. A course in Refrigeration and Air Conditioning Technology.

18. A course in English language (modula2) for two weeks.

19. Computerized competence course.

20. A course in teaching methods.

21. A course in (power point, Excel and word)

22. A course in the program (Google classroom)

23. ACAD course

4-

Name: Dr. Hashim Raed Hashim

1. Education:

1. Bachelor in Refrigeration and Air Conditioning Techniques Engineering Alrafidain university college 2016
2. Master Engineering - Specialization in Heat transfer/ thermals - Department of mechanical Engineering - University putra malaysia - 2020 - Grade Very Good.

2. Academic Experience:

- Teaching at Al-Rafidain University - Department of Power Mechanical Techniques Engineering, Refrigeration and Air Conditioning branch - college of engineering and technical engineering - from 2024 until now.

Assistant dean for scientific affairs from 2025 until now

3. Non-Academic Experience:

None

4. Certifications or Professional Registrations:

- Iraqi Engineers Syndicate

5. Current Membership in Professional Organizations:

- Iraqi Engineers Syndicate

6. Honors and Awards:

7. Principal Publications and Presentations of Past Five Years

- 1) Numerical and Experimental Studies of the Nanofluid Characteristics that Effects on Heat Transfer Enhancement: Review and Comparison
- 2) Numerical Investigation of the Effect of Ethylene Glycol with SnFe₂O₃ Hybrid Nanofluid on Heat Transfer in Flat, Face Step, and Radial Corrugated Microchannels

8. Service Activities:

9. Professional Development Activities:

5- Name: Lecturer Dr. Mustafa Abdulsalam Mustafa Talib

1. Education:

1. Bachelor of Mechanical Engineering
Kyiv Aviation Engineering Institute – 1979
Grade: Very Good
2. Master of Aeronautical Engineering
Kyiv Aviation Engineering Institute – 1981
Grade: Very Good

3. PhD in Engineering (Aircraft Maintenance and Aero Engines)
National Aviation University – Kyiv, Ukraine
Year: 2008
Grade: Very Good
-

2. Academic Experience:

- Lecturer at Al-Rafidain University College
Department of Mechanical Power Techniques Engineering
From 2013 to present
 - Lecturer at Marawi Technical College – Sudan (2009–2011)
 - Lecturer at the Military Technical Institute (1993–2003)
 - Experience in mechanical design using AutoCAD
 - Proficient in computer applications:
 - Microsoft Excel
 - Microsoft Word
 - PowerPoint
 - Google Classroom
 - Google Forms
-

3. Non-Academic Experience:

- Aircraft Engineer
 - Director of Aircraft Maintenance Workshop
-

4. Certifications or Professional Registrations:

- Iraqi Engineers Syndicate
 - Iraqi Teachers Syndicate
-

5. Current Professional Memberships:

- Iraqi Engineers Syndicate
 - Iraqi Teachers Syndicate
-

6. Honors and Awards:

- a. Letters of appreciation from the College Council for achieving a high annual evaluation
 - b. Certificates of appreciation and participation in graduation project exhibitions
 - c. Certificate of participation in scientific seminars of the college
-

7. Scientific Publications and Research (Last Five Years):

- 1. The Influence of Water Temperature Change on Static Pressure in a Centrifugal Pump
 - 2. Natural Convection Heat Transfer in a Concentric Annulus Vertical Cylinders Embedded with Porous Media
 - 3. Numerical Investigation of Hydrostatic Pressure on Free Vibrating Rectangular Cantilever Plates Partially Submerged in Viscous Media
 - 4. Combined Free and Forced Convection Inside an Enclosure
 - 5. The Influence of Water Temperature Change on Static Pressure in a Centrifugal Pump
 - 6. Numerical Modeling of Supersonic Flow Through a Ramjet Nozzle Using Ansys Fluent
 - 7. Using Computational Fluid Dynamics (CFD) to Simulate the NACA 0011 Aerofoil Wing Sections and Obtaining Lift and Drag Characteristics with Different Angles of Inclination
 - 8. Book: Aerodynamics Theory
 - 9. Book: Mathematical Methods and Laws in Mechanical Engineering
-

8. Service Activities:

University:

None

College:

None

9. Professional Development Activities:

- 1. Computer Proficiency Course
- 2. Teaching Methods Course
- 3. Arabic Language Proficiency Course
- 4. PowerPoint Course
- 5. Google Classroom Course

6- Name: Lecturer. Atheer Raheem Abdullah

1. Education:

1. Bachelor of Mechanical Engineering - College of Engineering - Department of Mechanical Engineering - University of Technology - 2001
2. Master of Mechanical Engineering - Specialization in power - Department of Mechanical Engineering - University of Gazi Antip (Turkey) 2015 in Grade Very Good.

2. Academic Experience:

- Teaching at the Baghdad Institute of Technology, Automotive Department 2004
- Experience in mechanical designs using the Ansys program
- Experience in using computer programs (excel, word, power point, Google classroom, Google forms)
- Teaching at Al-Rafidain University College - Department of Refrigeration and Air Conditioning Techniques Engineering - from 2016 until now

3. Non-Academic Experience:

None

4. Certifications or Professional Registrations:

- Iraqi Engineers Syndicate
- Iraqi Teachers Syndicate

5. Current Membership in Professional Organizations:

- Iraqi Engineers Syndicate

➤ 6. Honors and Awards:

- a. Thanks and appreciation from the College Council for obtaining a high annual evaluation.
- b. Thanks and appreciation from the Presidency of Al-Rafidain University for obtaining the title of Lecture.
- c. Thanks and appreciation from the Presidency of Al-Mustansiriya University for obtaining the title of Lecture.

7. Principal Publications and Presentations of Past Five Years

1) Thermal Performance and Pressure Drop Optimization in Particle-Based Solar Receivers for Next-Generation CSP Plants
Abdullah, A.R., Mustafa, M.A.S.

International Journal of Design and Nature and Eco dynamics Open source preview, 2025, 20(8), pp. 1769–1779

2) Development and Evaluation of Physically Based Fatigue Damage Model in Textile Reinforced Plastics

Hadi, A.S., Azzawi, M.M., Abdullah, A.R.

International Journal of Computational Methods and Experimental Measurements Open source preview, 2025, 13(2), pp. 239–249

3) Numerical Modeling of Supersonic Flow Through a Ramjet Nozzle Using Ansys Fluent

Mustafa, A., Abdullah, A.R., Al-Azzawi, M.M.

International Journal of Computational Methods and Experimental Measurements Open source preview, 2025, 13(4), pp. 993–1005

4) Improving the Performance of Solar PV Panels Using Advanced Cooling Technologies

Abdullah, A.R., Maid, I.W., Askari, E.S.S.

International Journal of Heat and Technology Open source preview, 2024, 42(5), pp. 1697–1708

5) Enhancing Solar Panel Cooling and Thermal Efficiency Using Nanoparticle-Enhanced Phase Change Materials

Merzah, B.N., Almakhyoul, Z.M., Abdullah, A.R., Ayed, S.K., Majdi, H.S.

Mathematical Modelling of Engineering Problems Open source preview, 2024, 11(6), pp. 1547–1557

6) Study of End-Effector of (2DOF) Five-Bar Robot Positioning: Accuracy, Modeling and Simulation

Al-Azzawi, M.M., Majdi, H.S., Abdullah, A.R.

Journal European Des Systems Automatizes Open source preview, 2024, 57(2), pp. 335–344

7) Increasing Photovoltaic Panel Thermal Efficiency Using Phase Change Materials and Heatsinks: A Numerical and Analytical Study

Jaber, H.J., Mousa Al-Musawi, S.T., Abdullah, A.R., ... Majdi, H.S., Alderoubi, N.

Mathematical Modelling of Engineering Problems Open source preview, 2024, 11(3), pp. 611–618

8) Water Heating Rate as a Function of Magnetic Field and Electrical Induction Using Solar Energy

Al-Musawi, S.T.M., Elmnifi, M., Abdulrazig, O.D.H., ... Majdi, H.S., Habeeb, L.J.

Mathematical Modelling of Engineering Problems Open source preview, 2024, 11(2), pp. 316–324

9) EXPERIMENTAL AND SIMULATION STUDY FOR IMPROVING THE SOLAR CELL EFFICIENCY BY USING ALUMINUM HEAT SINKS

Elmnifi, M., Mansur, A.N., Hassan, A.K., ... Majdi, H.S., Habeeb, L.J.

Proceedings on Engineering Sciences Open source preview, 2024, 6(1), pp. 161–170

10) NUMERICAL ANALYSIS OF WIND TURBINE BLADES MANUFACTURED FROM COMPOSITE MATERIALS AT DIFFERENT VELOCITIES AND ARRANGEMENTS

Jaber, H.M., Shams, O.A., Majdi, H.S., Abdullah, A.R., Habeeb, L.J.

Journal of Engineering Science and Technology Open source preview, 2023, 18, pp. 1–17

11) Heat Transfer Augmentation in a Micro-channel Heat Sink Technique Under Different Coolant Flow: A Comprehensive Review of the Recent Literature

Hadi, J.M., Abdullah, A.R., Majel, B.M., Habeeb, L.J.

Aip Conference Proceedings Open source preview, 2023, 2839(1), 020003

12) CFD Investigation of One-Way Interaction (Fluid-Heat-Deformation) in a Channel with Obstacles

Majdi, H.S., Abaas, A.A.A.-N., Abdullah, A.R., ... Habeeb, L.J., Zivkovic, D.

Aip Conference Proceedings Open source preview, 2023, 2839(1), 020014

13) High-Speed Helical Gear Design Parameters Effect on the Dynamic Stress

Hassan, A.R., Hawas, M.N., Abdullah, A.R., Majdi, H.S., Habeeb, L.J.

Mathematical Modelling of Engineering Problems Open source preview, 2023, 10(4), pp. 1189–1198

14) A Comparative Analysis of the Efficiency of Monocrystalline and Polycrystalline Photovoltaic Modules: CTI-80 and YHM-205-27P

Majdi, H.S., Younis, A., Abdullah, A.R., Elmnifi, M., Habeeb, L.J.

International Journal of Design and Nature and Ecodynamics Open source preview, 2023, 18(4), pp. 975–982

15) Improving the Mechanical Properties of the Air-Conditioning Pipe Using Composite Materials

Al Hussain, D.N.D., Alkanany, M.K.N., Hammoodi, K.A., ... Majdi, H.S., Habeeb, L.J.

Revue Des Composites Et Des Materiaux Avances Open source preview, 2023, 33(2), pp. 103–109

16) Finite Element Analysis of Crankshaft Stress and Vibration in Internal Combustion Engines Using ANSYS

Azzawi, M.M., Hadi, A.S., Abdullah, A.R.

Mathematical Modelling of Engineering Problems Open source preview, 2023, 10(3), pp. 1011–1016

17) Numerical Simulation of Heat Transfer and Flow Enhancement Through Multi-Row Film Holes for Gas Turbine Blade Cooling

Majdi, H.S., Merzah, B.N., Al-Musawi, S.T.M., Abdullah, A.R.

Mathematical Modelling of Engineering Problems Open source preview, 2023, 10(3), pp. 1031–1038

18) Evaluation of Bifacial Solar Energy Performance of a Cell with a Dual-Axes Tracker

Majdi, H.S., Elmnifi, M., Abdullah, A.R., Eltawati, A.S., Habeeb, L.J.

International Journal of Heat and Technology Open source preview, 2022, 40(5), pp. 1299–1304

19) Numerical Study of Photovoltaic Panel Thermal Efficiency Using Multi-Cooling Process

Abdullah, A.R., Majel, B.M.

International Journal of Heat and Technology Open source preview, 2022, 40(4), pp. 1100–1106

20) CFD Evaluation of Air Conditioning on the Distribution and Dispersion of COVID-19 Virus in a Room

Hasan, W.K., Al-Azzawi, M.M., Abdullah, A.R., Habeeb, L.J.

International Journal of Heat and Technology Open source preview, 2022, 40(2), pp. 627–633

21) MODELING OF THERMAL DISTRIBUTIONS BY ANALYZING THE HEAT TOLERANCE OF A ROBOTIC GRIPPER PIVOT EXPOSED TO HEATED ELECTRONICS

Majdi, H.S., Abdullah, A.R., Hadi, A.S., Habeeb, L.J.

Eastern European Journal of Enterprise Technologies Open source preview, 2022, 1(1-115), pp. 24–28

22) Experimental investigation of the effect of forced vibration on natural convection heat transfer in a concentric vertical cylinder

Al-Azzawi, M.M., Abdullah, A.R., Majel, B.M., Habeeb, L.J.

Journal of Mechanical Engineering Research and Developments Open source preview, 2021, 44(3), pp. 56–65

23) Two-Way Fluid-structure Interaction Study of Twisted Tape Insert in a Circular Tube Having Integral Fins with Nanofluids

Mustafa, M.A., Abdullah, A.R., Hasan, W.K., H a b e e b, L.J., Nassar, M.F.

Eastern European Journal of Enterprise Technologies Open source preview, 2021, 3, pp. 25–34

24) Natural convection heat transfer in a concentric annulus vertical cylinders embedded with porous media

Mahmood, M.A., Mustafa, M.A., Al-Azzawi, M.M., Abdullah, A.R.

Journal of Advanced Research in Fluid Mechanics and Thermal Sciences Open source preview, 2020, 66(2), pp. 65–83

25) Review on enhancement of natural convection heat transfer inside enclosure

Ayed, S.K., Al Guboori, A.R., Hussain, H.M., Habeeb, L.J.

Journal of Mechanical Engineering Research and Developments Open source preview, 2020, 44(1), pp. 123–134

26) Natural Convection Heat Transfer in An Inclined Elliptic Enclosure with Circular Heat Source

Guboori, A.R., Al-Azzawi, M.M., Kalash, A.R., Habeeb, L.J.

Journal of Mechanical Engineering Research and Developments Open source preview, 2020, 43(6), pp. 207–222

27) Porosity influence on natural convection heat transfer from a heated cylinder in a square porous enclosure

Alturaihi, M.H., Jassim, L., Alguboori, A.R., Habeeb, L.J., Jalghaf, H.K.

Journal of Mechanical Engineering Research and Developments Open source preview, 2020, 43(6), pp. 236–254

28) Heat and mass transfer investigation in a single slope passive solar still using chemical additives

Majdi, H.S., Mohammed, A.A., Alguboori, A.R., Habeeb, L.J.

Nicst 2019 1st Al Noor International Conference for Science and Technology Open source preview, 2019, pp. 20–25, 9043824

29) Numerical investigation of hydrostatic pressure on free vibrating rectangular cantilever plates partially submerged in viscous media

Abdullah, A.R., Hasan, W.K., Mustafa, M.A.

Journal of Advanced Research in Fluid Mechanics and Thermal Sciences Open source preview, 2019, 60(1), pp. 1–14

8. Service Activities:

None

9. Professional Development Activities:

24. A course in programming language (modula2) for a month

25. Computerized competence course

26. A course in (power point)

27. A course in the program (Google classroom)

Name: Dr. Wadhah Noori Hummadi Alnaami

1. Education:

1. Bachelor of Agricultural Mechanization Engineering Engineering - University of Baghdad - 1994-1998

2. Master of Agricultural Mechanization Engineering Mosul University 2005-2008

3. PhD in Agricultural Mechanization and Automation Engineering National University Putra Malaysia (UPM) 2012-2017

2. Academic Experience:

• Teaching at the Al-Rafidain University Collage , Department of Power Mechanical Techniques Engineering from 2019- until now.

□ Businessmen Magazine Amman, Jordan as Journalist Advertisement Editor 2006-2008.

• Academic Lecturer and Lab Assistant in Baghdad University 2000-2001.

3. Non-Academic Experience:

None

4. Certifications or Professional Registrations:

* Iraqi Agriculture Engineers Syndicate

* Iraqi Teachers Syndicate

5. Current Membership in Professional Organizations:

* Iraqi Agriculture Engineers Syndicate

* Iraqi Teachers Syndicate

7. Principal Publications and Presentations :

MODULE DESCRIPTION FORM

Module Information معلومات المادة الدراسية				
Module Title	Mathematics	Module Delivery		
Module Type	C	☒ Theory ☐ Lecture ☐ Lab ☐ Tutorial ☐ Practical ☐ Seminar		
Module Code	MPAC100			
ECTS Credits	8			
SWL (hr/sem)	200			
Module Level		1	Semester of Delivery	1
Administering Department		Mechanical Power Eng. Dep.	College	TCB

Relation with other Modules العلاقة مع المواد الدراسية الأخرى			
Prerequisite module	None	Semester	
Co-requisites module	None	Semester	

Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	Teaching the student the basic and advanced principles of calculus and its applications to develop the students mental abilities to solve problems and make use of available information in the other scientific materials.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	To apply the knowledge of mathematics, science and engineering fundamentals.
Indicative Contents المحتويات الإرشادية	

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	Assessment is based on hand-in assignments, written exam, Case study, Quizzes, seminars, Practical testing and Online testing.

Student Workload (SWL) الحمل الدراسي للطلاب			
Structured SWL (h/sem) الحمل الدراسي المنتظم للطلاب خلال الفصل	87	Structured SWL (h/w) الحمل الدراسي المنتظم للطلاب أسبوعيا	6
Unstructured SWL (h/sem) الحمل الدراسي غير المنتظم للطلاب خلال الفصل	113	Unstructured SWL (h/w) الحمل الدراسي غير المنتظم للطلاب أسبوعيا	10
Total SWL (h/sem) الحمل الدراسي الكلي للطلاب خلال الفصل	200		

Module Evaluation تقييم المادة الدراسية					
As		Time/Number	Weight (Marks)	Week Due	Relevant Learning Outcome
Formative assessment	Quizzes	2	10% (15)	5, 10	LO #1, 2, 7 and 9
	Assignments	4	10% (15)	2, 8	LO # 3, 4, 5 and 6
	Projects / Lab.	0	0	0	
	Report	2	10% (10)	7,14	LO # 5, 6 and 10
Summative assessment	Midterm Exam	2 hr	10% (10)	8	LO # 1-7
	Final Exam	2hr	50% (50)	16	All
Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus) المنهاج الأسبوعي النظري	
Week	Material Covered
Week 1	Determinants, properties, Grammar's rule, application of determinant
Week 2	Vectors, vectors in space, unit vector, Scalar product, vector product
Week 3	Trigonometric functions & relation, Graphing of functions, Trigonometric equations
Week 4	Function of limits, Algebraic limit, Trigonometric limit, Infinity as limit
Week 5	Derivative rule, Algebraic & Trigonometric derivative, Chain rule, velocity & acceleration
Week 6	Inverse trigonometric functions & its derivative, Logarithm & Exponential functions & its derivative
Week 7	Hyperbolic functions & its derivative, Inverse hyperbolic functions & its derivative
Week 8	Integration, integrals of trigonometric & inverse functions, Integrals of logarithm & Exponential functions
Week 9	Integrals of logarithm & Exponential functions, Integrals of hyperbolic functions & its derivative, L'Hopital's rules

Week 10	Integration methods; Integration by parts, Integration by partial fraction
Week 11	Integration by trigonometric substitution, Integration of $ax^2 + bx + c$
Week 12	Application of Integration, Area under the curve & between two curves
Week 13	Surface area generated, Length of the curve
Week 14	Volume generated by rotation of curve, Simple differential equations
Week 15	Simpson rule for area, Trapezoidal rule for area, applications
Week 16	Preparatory week before the final Exam

MODULE DESCRIPTION FORM

نموذج وصف المادة الدراسية

Module Information					
معلومات المادة الدراسية					
Module Title	Engineering Drawing		Module Delivery		
Module Type	C		☐ Theory ☒ Lecture ☒ Lab ☐ Tutorial ☐ Practical ☐ Seminar		
Module Code	MPAC101				
ECTS Credits	6				
SWL (hr/sem)	150				
Module Level		1	Semester of Delivery		1
Administering Department		Mechanical Power Eng. Dep.	College	TCB	

Relation with other Modules العلاقة مع المواد الدراسية الأخرى			
Prerequisite module	None	Semester	

Co-requisites module	None	Semester	
Module Aims, Learning Outcomes and Indicative Contents			
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية			
Module Aims أهداف المادة الدراسية	1. This module describes the skills, knowledge, and attitude required to apply technical drawing. At the end of this module, learners will be able to Introduce technical drawings, apply principles of drawing, and project views. 2. to make the students know how to draw (Engineering Drawing) by using AUTOCAD program. 3. This course deals with the basic concept of Engineering Drawing. 4. Define the Engineering Drawing - The Tools used in Engineering Drawing - Types of drawing sheets, types of lines. 5. Learning 2D interface in AutoCAD. 6. Learning 3D interface in AutoCAD.		
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1- Define the Engineering Drawing - The Tools used in Engineering Drawing - Types of drawing sheets, types of lines 2-Introduction to AutoCAD and learning how to use the program interface 3-Learning how to use Draw toolbar and its content 4-Learning how to use modify toolbar and its content 5-Learning how to use dimension toolbar and its content and draw 2D exercises 6-Theory of projection, Theory of projection 1st angle 7-Theory of projection 3rd angle 7-Drawing the three projection views 8-Theory of Section and Drawing the three Section views 9-Learning 3D interface in AutoCAD and 3D tools, 3D exercises		
Indicative Contents المحتويات الإرشادية	indicative contents include the following: Part A: The Purpose of Engineering Drawings An engineering drawing is a subcategory of technical drawings. The purpose is to convey all the information necessary for manufacturing a product or a part. Engineering drawings use standardized language and symbols. This makes understanding the drawings simple with little to no personal interpretation		

	possibilities.
	Part B: understanding AutoCAD
	AutoCAD interface and Its usage like centers around drawing with electronic equivalents of real-life drafting tools. The added support of digital precision helps with measurements and calculations, 3D components, and data sharing.
	Part C: 2D Drawings
	Using lines to make 2D drawings, apply dimensions rules, design 2d shapes and drawing projections and sectioning views.
	Part D: 3D drawings
	3D CAD, or three-dimensional computer-aided design, is technology for design and technical documentation, which replaces manual drafting with an automated process.

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	The main strategy that will be adopted in delivering this module is to courage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students. YouTube channel for the teacher includes lessons to help the students in their studying https://www.youtube.com/channel/UCiUmlY4CLQn5ycY4von1P5g

Prerequisite module	None		Semester	
Co-requisites module	None		Semester	

Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	The main object of this unit is to identify the students on the gain of the manual skills by preceding the operations and manufacturing processes, and doing the maintenance by using different manual tools and measuring instruments
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	By the end of the engineering mechanics module, students should be able to: preceding the operations and manufacturing processes, and doing the maintenance by using different manual tools and measuring instruments
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. 1. Foundry workshop: 2. Casting of metals and their importance - Purpose of using castings in industry - Contents of the foundry unit - Industrial safety reserves in the foundry - Forming a sand mold for a one-piece model - Sands of molds and hearts: types, sources and properties - Additives, mixing processes and adjusting ingredients - Use of sand mixer - Handling of improvised sand - Sand handling devices - forming sand molds by manual method for a one-piece model - forming a sand mold.

3. Sand mold for a one-piece model with defining the estuaries and elevators - Metal smelting and pouring into the mold - Extracting and cleaning the castings - Forming a mold using the pulp box and drying it in the drying oven - Forming a sand mold for a simple two-piece model with a dog.
4. Forming a sandy mold like the previous one with melting the metal and pouring it into a mold and taking out the casting and cleaning it - Metal melting furnaces: types, qualities, uses (rotary kiln, stirrers and stationary) - Reviewing and examining the castings - Determining the apparent defects and their causes - Reviewing the dimensions of the castings and ensuring that they conform to the required dimensions.
5. Furnaces: types, methods of measurement, how a Vernier works to read altimeters with depths - the process of marking (shenk) - base surfaces - the number used - backing materials - marking thorns - just vertebrae - mens of guilt and guilt notation - right angle - pointing flowers - scale heights and depths
6. Files and the cold process: types and specifications of files - mechanized and their types - methods of attaching artifacts to them - uses of files - the method of cleaning the initiator - the cold process - an exercise on the process of marking and simple filings.
7. Saw cutting: hand saw, saw weapon, saw weapon installation, conditions to be met in the sawing process - an exercise on the sawing process.
8. Lathe: specifications, use, accessories and installation methods - forming the lathe - types of lathe pens and the use of measuring tools.
9. Turning operations: flat turning, straightening, simple graded work with the use of measuring tools.
10. Lathe the internal and external loot in different ways with an explanation of the laws of each method - doing an exercise for the external loot and another for the internal loot.
11. Welding workshop:
12. Occupational safety and security needs - gas welding - equipment used and how to install and control it - other auxiliary tools - used gases and their specifications - welding safety, types and measurements - other auxiliary materials - welding equipment - types of flames, method of ignition and control of the required flame - works - rinsing and cleaning the basins to be welded.
13. Practical exercises for welding opposite surfaces, perpendicular surfaces, inclined surfaces and circuit welding, longitudinal and transverse cutting - cutting: circle, irregular shapes - electric arc welding - equipment used.
14. Welding equipment - Practical training on the use of electric arc welding of different surfaces - Point and tape welding - Equipment used in each type - Types of electrodes and their installation method - Practical training on the use of each type.

	15. Welding using argon gas - doing welding exercises using argon gas. 16. Gas cutting operations - equipment used - precautions to be provided. 17. Assembly exercises using various different cutting and welding equipment.
--	--

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, and hand-in assignments while at the same time refining and expanding their critical thinking skills through the written exam, Case studies, Quizzes, seminars, Practical testing, and Online testing. and this will be achieved through classes and interactive tutorials.

MODULE DESCRIPTION FORM

نموذج وصف المادة الدراسية

Module Information معلومات المادة الدراسية			
Module Title	Engineering Materials		Module Delivery
Module Type	C	☒ Theory ☐ Lecture ☐ Lab ☐ Tutorial ☐ Practical ☐ Seminar	
Module Code	MPAC103		
ECTS Credits	6		
SWL (hr/sem)	150		
Module Level	1		
Administering Department	Mechanical Power Eng. Dep.	College	TCB

Relation with other Modules العلاقة مع المواد الدراسية الأخرى			
Prerequisite module	None	Semester	
Co-requisites module	None	Semester	

Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	1. Explain the atomic structure and types of primary and secondary atomic and molecular bonding. 2. Explain the crystal structures and geometry and classify different classes of space lattices in crystalline solids. 3. Perform different types of mechanical testing for evaluation of mechanical properties of material. 4. Extract information of materials behavior from phase diagram. 5. Identify the structures, properties and applications of the main engineering materials (metals, alloys, polymers, ceramics and composites). 6. Explain corrosion mechanisms and types of corrosions and methods of corrosion prevention.

	7. Explain the Nano materials.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	The student able to: 1. Mechanical Properties, stress-strain curve, elasticity, plasticity, ductility, young modulus, tensile stress, yield stress, bricking stress, true and engineering stress-strain diagram). 2. Knowledge of Ionic bond, inter-atomic distance attraction forces between atoms, coordination number, covalent bond, and Metallic bond. 3. Knowledge the Crystal structure, unit cell, types of unit cells simple cubic, Face centered cubic, body centered cubic, atomic packing factor, Previous lattice, Miller index, . 4. To Understanding the Phase diagrams 5. To know the types of Engineering Materials 6. To know Corrosion, Definition, why it happens, Type of corrosion, Dry and wet corrosion. Eight Form of corrosion. Mechanism of crevice corrosion 7. To know Methods of prevention and protection.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following: 1-Crystalline and non Crystalline Materials, Metallic crystal structures crystallographic directions ,crystallographic planes-Types of crystal structure, Packing factor.Bonds ,metallic bond ,ionic bonds ,covalent bond ,vander waals bond , hydrogen bond (12 hr) - Defects ,point defects ,dislocations ,linear defects ,planar defects (3hr) -Mechanical properties ,Hardness (Brinell hardness ,Vickers hardness , Rockwell hardness) Tensile test, Impact test, Creep test, Fatigue test. (15 hr) -Ferrous and nonferrous alloys in air conditioning and refrigeration equipment's Copper alloys , Aluminum alloys (3hr) -Solidi faction. Solid solution - Phase –diagrams for binary alloys, Complete solubility in both liquid and solid state, Complete solubility in liquid state and complete insolubility in solid state, Complete solubility in liquid state and limited solubility in solid state, Iron –carbon systems , Types of iron- carbon systems (12 hr) - Corrosion and corrosion prevention(3hr) -Applications of Nano materials, types ,manufactures of Nano materials.(3hr)

Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims	1. This is the basic subject for all electrical and electronic circuits. 2. This course deals with the basic concept of electrical circuits. 3. To understand voltage, current and power from a given circuit. 4. To develop problem solving skills and understanding of circuit theory through the application of techniques. 5. To understand Kirchhoff's current and voltage Laws problems.
Module Learning Outcomes	Upon completion of the course, students should be able to: 1. Define Ohm's law. 2. List the various terms associated with electrical circuits. 3. Recognize how electricity works in electrical circuits. 4. Describe electrical power, charge, and current. 5. Explain the two Kirchhoff's laws used in circuit analysis. 6. Discuss the various properties of resistors, capacitors, and inductors. 7. Discuss the operations of sinusoid and phasors in an electric circuit. 8. Identify the capacitor and inductor phasor relationship with respect to

	voltage and current.
Indicative Contents	Indicative content includes the following. DC circuits – Current and voltage definitions, Passive sign convention and circuit elements, Combining resistive elements in series and parallel. Kirchhoff's laws and Ohm's law. Anatomy of a circuit, Network reduction. [15 hrs] AC circuits I – Time dependent signals, average and RMS values. Capacitance and inductance, energy storage elements, simple AC steady-state sinusoidal analysis. [15 hrs] AC Circuits II - RL, RC and RLC circuits - Frequency response of RLC circuits, simple filter and band-pass circuits, resonance and Q-factor, use of Bode plots, use of differential equations and their solutions. Time response (natural and step responses). Introduction to second order circuits. [15 hrs] Revision problem classes. [6 hrs] Resistive networks, voltage and current sources, Thevenin equivalent circuits, current and voltage division, input resistance, output resistance, maximum power transfer, RMS and power dissipation, current limiting and over voltage protection. [15 hrs]

	Final Exam	3hr	50% (50)	16	All
Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus) المنهاج الاسبوعي النظري	
Week	Material Covered
Week 1	Resistance, conductance, effect of temp. on the resistance value
Week 2	Ohm's law, series connection, parallel connection, compound connection
Week 3	Voltage and current divider solved examples, kirchhoff's laws
Week 4	Star-delta conversion examples
Week 5	Thevenin's theorem, maximum power transfer
Week 6	Nodal method, superposition
Week 7	Alternating voltage and current
Week 8	Frequency, period, instantaneous value of voltage and current
Week 9	Component of A.C circuit, pure resistance, pure inductance, pure capacitance
Week 10	Series A.C circuit, R,L,C in series
Week 11	Impedance, phase angle, resonance, phase diagram
Week 12	Parallel A.C circuit, R,L,C, Admittance, power factor
Week 13	Active, reactive, apparent power in A.C circuit
Week 14	3-phase circuit
Week 15	Preparatory week before the final Exam

Delivery Plan (Weekly Lab. Syllabus) المنهاج الاسبوعي للمختبر	
Week	Material Covered
Week 1	Lab 1: Using Multimeter to measure Voltage, Current and Resistance
Week 2	Lab 2: Ohm's law.
Week 3	Lab 3: Voltage and current divider rules
Week 4	Lab 4: Kirchhoff's laws
Week 5	Lab 5: Thevenin's Theorem
Week 6	Lab 6: Series RLC circuit
Week 7	Lab 7: Parallel RLC circuit

Module Information			
معلومات المادة الدراسية			
Module Title	Engineering Mechanics		Module Delivery
Module Type	C		☒ Theory ☐ Lecture ☐ Lab ☐ Tutorial ☐ Practical ☐ Seminar
Module Code	MPAC108		
ECTS Credits	8		
SWL (hr/sem)	200		
Module Level	1	Semester of Delivery	
Administering Department	Mechanical Power Eng. Dep.	College	TCB

Relation with other Modules			
العلاقة مع المواد الدراسية الأخرى			
Prerequisite module	MPAC100	Semester	L1,S1
Co-requisites module		Semester	

Module Aims, Learning Outcomes and Indicative Contents	
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	

Module Aims أهداف المادة الدراسية	1. The course aims to provide first-stage students with basic knowledge of engineering mechanics. 2. Everything related to forces and motion and related concepts such as equilibrium and analysis of forces, centers of gravity, moments of inertia, friction and motion of bodies are studied. 3. The course aims to enable students to gain access to the science of geometry by understanding how to perform correct engineering analysis 4. Dealing with laws, equations, illustrations, and other data, and linking data together to reach outputs. 5. Enabling the student to be able to analyze, devise and draw conclusions.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1. The student can understand the fundamentals and laws of engineering mechanics. 2. The student is familiar with the types of forces and methods of analysis. 3. The student can understand the basics of the Equilibrium of a Particle 4. Understand the Moment of a Force around the point and axis. 5. Learn the basics of Equilibrium of a Rigid Body and equations of equilibrium. 6. The student can understand Structural Analysis. 7. Enabling students to obtain knowledge, understanding, and analyze the motion of mechanical systems. 8. Learn concepts of motion laws. 9. Learn and analyze the motion of projectiles. 10. Absolute Dependent Motion Analysis of Two Particles. 11. The Students can understand the Kinetics of a Particle: Force and Acceleration. 12. The Students can understand the Kinetics of a Particle: Work and Energy.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. 1. The fundamentals and laws of engineering mechanics. 2. Analyze forces. 3. Equilibrium of a Particle 4. Moment of a Force 5. Structural Analysis 6. Laws of Motion. 7. Analyze the motion of mechanical systems.

--

Module Aims أهداف المادة الدراسية	Studying the principles of thermodynamics including, thermal systems according to energy interactions with their direct surroundings, the differences in the properties of both the system and the surrounding with their engineering applications
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1. To know the basic properties of material with units 2. To know the laws of thermodynamics 3. To know the phases of substance 4. To know the basic thermodynamic cycles 5. To know the entropy 6. To know the basics on combustion
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. Part A – Laws of thermodynamics First and second law of thermodynamics. [24 hrs.] Part B – P-V diagram P-v diagram of water and different gases. Phases of the water and substances. [16 hrs.] Part C – Thermal cycle Carnot cycle, vapor cycle, steam cycle, gas cycle, Otto cycle, Diesel cycle, duel cycle, and duel cycle. [58 hrs.] Part D – Combustion Combustion, combustion and equilibrium equations [24 hrs.]

	Final Exam	3 hr.	50% (50)	15	All
Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus) المنهاج الاسبوعي النظري	
Week	Material Covered
Week 1	Introductions, references, units, pressure, force, work, Temperature, unit of temperature and conversion, temperature measurements. Zeorith law of Thermodynamics. Energy, types of energy, positional, kinetic, internal and flow energy energies. Heat and work, power, enthalpy.
Week 2	First law of thermodynamics, Steady flow energy equation for open system, non-flow energy equation Transient state,
Week 3	Ideal gas, Boyle's law and Charles law and equation of state, Specific heat at constant pressure and constant volume, Closed system processes using ideal gas. Isometric and isobaric processes
Week 4	Isothermal and adiabatic processes, Polytropic processes, Control volume processes
Week 5	Vapour, phase of substance, Phase change curve on P-V diagram. Dryness fraction, liquid and vapour lines, wet vapour
Week 6	Steam tables and Examples on steam tables, Super-heated vapour, tables of super-heated tables
Week 7	Processes using two phase system, processes on P-V diagram, Irreversible processes Closed system, Second law of thermodynamics, heat engine, heat pump
Week 8	Carnot cycle and reversed Carnot cycle. Irreversible and reversible processes
Week 9	Clausius in equality for second law, Entropy on T-S and entropy calculations.
Week 10	Entropy for vapour, Entropy for system and surroundings, Isentropic efficiency
Week 11	Air standard cycle, Otto cycle. Diesel and Dual cycles
Week 12	Steam power plants- Rankin Cycle, Rankin Cycle with superheated. Modified Rankin Cycle
Week 13	Modification on Carnot to use as vapour compression cycle. Vapour compression cycle,
Week 14	Combustion, combustion equations, equilibrium of combustion equation. Volumetric analysis on combustion process

Week 15	Final exam
---------	------------

Delivery Plan (Weekly Lab. Syllabus) المنهاج الاسبوعي للمختبر	
Week	Material Covered
Week 1	Measurement and instruments
Week 2	Types of temperature measurements
Week 3	Measuring the velocity of air
Week 4	Calibration of thermocouple
Week 5	Joule experiment
Week 6	Boyle Experiment
Week 7	Measuring of C.V of fuel
Week 8	Measuring specific heats
Week 9	Finding the law of expansion
Week 10	Measuring the latent heat of evaporation
Week 11	Heat pump
Week 12	finding of the degree of superheating
Week 13	Performance of simple compression cycle
Week 14	Actual vapour compression cycle
Week 15	Final exam

Module Aims, Learning Outcomes and Indicative Contents	
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	1- تعميق معرفة الطالب بقواعد اللغة والإملاء التي تعلمها سابقاً؛ ليتحاشى الوقوع في الأخطاء اللغوية والاملائية، وليسهل عليه كتابة التقارير وجميع الأعمال الكتابية بصورة صحيحة نحويًا ولغويًا. - توسيع نطاق الوعي اللغوي والأدبي ليشمل جميع الطلبة والمجتمع المحلي من خلال 2 المحاضرات والندوات والدورات التدريبية المختلفة، والأخذ بيد المبدعين من أصحاب المواهب.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	المعرفة والفهم والتطبيق من خلال إلقاء المحاضرات النظرية الصفية وحث الطلبة على قراءة كتاب معين في المادة، إضافة إلى تكليف الطلبة بواجبات بحثية، أو تقارير مكتوبة وذلك في مستوى السنة الأولى من الدراسة.
Indicative Contents المحتويات الإرشادية	يتكون المقرر من جزء واحد يتناول تعليم الطلبة القواعد العامة للكتابة باللغة العربية بما يضمن عدم الإخلال بأساسيات هذه اللغة.

Learning and Teaching Strategies	
استراتيجيات التعلم والتعليم	
Strategies	استراتيجيات التعلم: التعلم الذاتي - التعلم النشط - التعلم التعاوني. استراتيجيات التعليم: عرض المادة - طرح الأسئلة - اختبارات صفية - واجب بيتي.

Module Aims, Learning Outcomes and Indicative Contents			
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية			
Module Aims أهداف المادة الدراسية	1. Utilize the computer for fundamental tasks. 2. Identify and discuss the hardware components of the computer system. 3. Creating documents using a word processor and creating presentations. 4. To describe the evolution of computer networks and the Internet. 5. To describe the difference between a computer network and a distributed system. 6. To explain the difference between LAN, MAN, WAN		
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	Upon completion of the course, students should be able to: 1. Understand the basics of computers, their types and classifications. 2. Understand the physical input units. 3. Understand the physical output units. 4. Understanding operating systems and application programs. 5. Dealing with the Windows 10 operating system. 6. Knowing how to work with Word, Excel, Presentation programs. 7. Knowledge of the concepts of the Internet and the Web. 8. Knowledge of the concept of computer networks. 9. Know how to compare computer networks. 10. Know how to configure email. 11. Know how to computer troubleshoot.		
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. 1. This module, directed to first-year students in the Department of Total Quality Management Technologies, dealt with introducing the student to what a computer and what input and output devices [3]. 2. This module, directed to first-year students in the Department of Total Quality Management Technologies, dealt with introducing the student to what is the internal structure of a computer [9]. 3. This module, directed to first-year students in the Department of Total Quality Management Technologies, dealt with introducing the student to what is the Windows 2010 operating system [6]. 4. This module, directed to first-year students in the Total Quality Management Techniques Department, dealt with introducing the student to the basics of Office programs (Word and Excel, Presentation) [21]. 5. This module, directed to first-year students in the Department of Total Quality Management Technologies, dealt with introducing the student to the components of computer networks [3]. 6. This module, directed to first-year students in the Total Quality Management Techniques Department, introduced the student to how to compose an email and also how to computer troubleshoot [3].

Delivery Plan (Weekly Syllabus) المنهاج الأسبوعي النظري محتوى كل أسبوع يجب ان يغطي الوقت المحدد	
Week	Material Covered
Week 1	Introduction to Computer: Concepts of hardware and software with their components, concept of computing, data and information, applications of information electronics and communication technology (IECT), connecting input/output devices, and peripherals to CPU.
Week 2-3	Computer components: computer portions, hardware parts, i/o units, memory types, basic

	CPU components, computer ports, personal computer, personal computer (features and type).
Week 4-5-	Operating system and graphical user interface GUI: Operating system, basics of common operating system, the user interface, using mouse techniques, use of common icons, status bar, using menu and menu-selection, concept of folders and directions, opening and closing of different windows, creating short cuts.
Week 6-8	Word Processing: word processing basics, opening and closing of documents, text creation and manipulation, formatting of text, table handling, spell check, language setting and thesaurus, printing of word document.
Week 9-10	Spreadsheet: basics of spreadsheet, manipulation of cells, formulas and functions, editing of spreadsheet, printing of spreadsheet.
Week 11-12	Presentation Software: Basics of presentation software, creating presentations, preparation and presentation of slides, slide show, taking printouts of presentation/ handouts.
Week 13	Introduction to internet and web browsers: Computer networks basics, LAN, WAN, concept of internet and its applications, Connecting to internet, world wide web, web browsing software, search engines, understanding URL, domain name, IP address.
Week 14	Communications and Emails: Basics of electronic mail, getting an email account, sending and receiving emails, Accessing sent emails, using emails, document collaboration. Computer Troubleshooting: Identify and solving common hardware and software problems that computer users encounter. Basic troubleshooting techniques and tools for diagnosing and resolving issues (Electronic Intrusion & Viruses)
Week 15	Final Exam
Delivery Plan (Weekly Lab. Syllabus) المنهاج الاسبوعي للمختبر	
Week	Material Covered
Week 1	Explaining input and output devices practically.
Week 2-3	Explain the internal structure of the computer.
Week 4-5	Explanation of operating systems and application programs.
Week 6-8	Explain the Word Program.
Week 9-10	Explain the Excel Program.
Week 11-12	Explain the Presentation Program.

Week 13	Explain computer networks basics.
Week 14	Explain communications and Emails, Computer Troubleshooting (Electronic Intrusion & Viruses).
Week 15	Final Exam.

Relation with other Modules العلاقة مع المواد الدراسية الأخرى			
Prerequisite module	MPAC100	Semester	L1,S1

Co-requisites module		Semester	
----------------------	--	----------	--

Module Aims, Learning Outcomes and Indicative Contents	
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	The aim of this module are : 1. To introduce students to the mathematical concepts and techniques that They will encounter in the various engineering. 2. To develop an awareness of the role of mathematics in the solution of Engineering problems. 3. Solve problems involving differentiation and integration. 4. Solve system of linear equations using matrix method. 5. Apply vector methods to the solution of geometric problems. 6. Uses differential equations in problems of heat transfer and other Engineering systems.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1. Apply basic operation in vector algebra(cartesian and geometric representation) to represent lines and planes, calculate the gradient of a scalar field using partial derivatives. 2. Apply the basic rules and techniques of **differential** calculus and its application in engineering. 3. Apply the basic rules and techniques of **integral** calculus and its application in engineering. 4. Demonstrate the basics, rules and techniques for differential equation and partial differentiation. 5. Demonstrate the basics, rules and techniques of complex number algebra and its application in engineering. 6. Use basic operations of matrix algebra, determinants and their application in solving systems of linear equations. 7. Use of software packages for matrix calculations.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. Differential and integral calculus of functions of two or more variables and Their applications. Vectors in 3D and their applications, line and surface Integrals, infinite and power series ,matrices , functions of complex variables.

Delivery Plan (Weekly Syllabus) المنهاج الاسبوعي النظري	
Week	Material Covered
Week 1	Overview of differentiation and integration.
Week 2	Vectors in 3D , triple product of vectors (dot and cross), equations of line and plane in space.
Week 3	Complex numbers, De moiver's theory, power and roots of complex numbers, Euler formula, complex functions, Cauchy- Riemann equations.
Week 4	Functions of two or more variables, dependent and independent variables, limits, continuity, partial derivatives.
Week 5	Applications of partial derivatives, tangent plane to surface, normal line to surface, tangent line to curve, normal plane to curve, relative maximum and minimum points, directional

	derivative.
Week 6	Polar coordinate, polar functions, graph polar function, relations between polar and cartesian, cylindrical and spherical coordinate.
Week 7	Double integration ,change of double integration, polar coordinate in double integration.
Week 8	Applications of double integration.
Week 9	Triple integration, cylindrical and spherical coordinate in triple integration, applications.
Week 10	Line integrals, green theory.
Week 11	Sequences and series, finite and infinite series.
Week 12	Types of series, methods test diverge and converge of series.
Week 13	Power series, expansion of functions in power series (Taylor and Maclaurin).
Week 14	Ordinary differential equations, first and second O.D.E .
Week 15	Solving of first and second O.D.E , applications of O.D.E .
Week 16	Exam

Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims	To teach the student, 6. the basic skill of reading engineering drawing along with their simples and terms as well as the standards 7. . joining, bolts and gears, knowledge of assembly drawings 8. how to use ACD in mechanical drawing 9. fits and tolerances
Module Learning Outcomes	Upon completion of the course, students should be able to: 1- Focus on engineering drawing along with their simples and terms as well as the standards 2- joining, bolts and gears, knowledge of assembly drawings. 3- how to use ACD in mechanical drawing 4- fits and tolerances.
Indicative Contents	Indicative content includes the following. Application on computer, basic of engineering drawing with their simples and terms as well as their standards.[12hrs] using AutoCAD to draw an example of joining by bolts. [10 hrs] Classification of keys, pins and rivets. [10hrs] Application on computer, using AutoCAD to draw an example of joining of

	keys or pins. [10 hrs] Tolerances, basic size, limits of size and deviation. [10 hrs] Fits , classes of fit/ clearance. Transition. Interference. Calculation of fits & tolerance. [15 hrs] Assembly drawing using AutoCAD to draw general assembly. [10hrs] Application on computer, using AutoCAD to draw an example of spur gear. [10 hrs]

MODULE DESCRIPTION FORM

نموذج وصف المادة الدراسية

Module Information				
معلومات المادة الدراسية				
Module Title	Fluid Mechanics		Module Delivery	
Module Type	C		☐ Theory ☒ Lecture ☒ Lab ☐ Tutorial ☐ Practical ☐ Seminar	
Module Code	MPAC202			
ECTS Credits	6			
SWL (hr/sem)	150			
Module Level		2		Semester of Delivery
Administering Department		Mechanical Power	College	Technical Engineering College-

	Eng. Dep.		Baghdad
--	-----------	--	---------

Relation with other Modules العلاقة مع المواد الدراسية الأخرى			
Prerequisite module		Semester	
Co-requisites module		Semester	

Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	1. This module fluid mechanics is intended to develop a deeper understanding of the relationship between design and analysis processing as this module discusses various fluid systems.. 2. The student will be able to analyze simplified fluid problems with the aim of reduction of energy losses and manpower. The student will be able to identify/control the appropriate process parameters, and possible defects of processes malfunctions so as to remove them. 3. For each fluid process, the aspects covered include: aesthetics, principles, choices of materials, choice of processes, properties of materials, advantages and disadvantages, process economics. Examples are drawn from practical processes mainly used in aerospace, automotive and airconditioning industries. 4. To introduce the theory and practice of fluid machines parts and assemblies using a wide range of technologies. 5. To allow processes to be chosen appropriately for any given application with any given fluid material. 6. To develop group working, research and writing skills. 7. To provide knowledge on the influence of thermal and mechanical parameters on system structure.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1. Examine fluid processes to describe the system properties of fluid devices. 2. Calculate and measure the fluid behavior in thermal processes. 3. Define the characteristics of various fluid operations. 4. Choose appropriate processes for different parts. 5. Design parts such that they are suitable for energy utilization using appropriate techniques. 6. Graduates from this module will be skilled in the methods of scientific investigation. 7. They will be able to think as a fluid engineer, critically evaluating scientific information and solving scientific problems. 8. will be able to effectively communicate scientific information.

Indicative Contents المحتويات الإرشادية	1) Introduction to Fluid Mechanics. 1. Fluid Properties. 2. density. 3. viscosity. 4. pressure. 5. Shear stress. 2) Fluid Statics. a) Pressure Distribution. b) Forces. c) Buoyancy. d) Manometers. 3) Fluid Dynamics a) Momentum b) Control Volume c) Energy d) Continuity 4) Fluid machines and hydraulics
---	--

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	1. Quizzes and tests throughout the semester to check understanding and knowledge 2. Examinations, both written and practical, that assess learners' understanding of concepts, principles, and theories related to Fluid Processes 3. Observation of learners' practical skills in laboratory and workshop based or simulated settings. 4. Peer evaluation and feedback tools used as part of group projects or reciprocal feedback assignments. 5. Assignments and essays used to assess learners' comprehension of theoretical concepts. 6. Presentation and demonstration of acquired knowledge in real-world scenarios.

Module Aims, Learning Outcomes and Indicative Contents
--

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	1. Introduce the student to the basic processes of refrigeration and conditioning 2. Identifying the properties of air and the processes that take place on the moisture content of air. 3. Learn about the different cooling media and how to use their tables and curves. 4. Learn about the refrigeration compression system and its accessories
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1- The student will be able to complete basic operations calculations on the content of moisture air content 2- The student will be able to determine the internal and external conditions for the design of the air conditioning system according to the conditions of human comfort. 3- The student will be able to complete all the operations of the compression refrigeration system, its components and accessories.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. Part A – Air Conditioning The basic properties of a mixture of air and water vapor: components of atmospheric air, general equation of gases, Dalton's law of partial pressures, saturated vapor pressure, water vapor pressure in moist air, relative humidity, moisture content, humidification percentage, dew point, enthalpy, The psychrometric scheme and adaptation processes: a general explanation of the psychrometric chart and the basis for its construction. [15 hrs] Sensible cooling, sensible heating, dehumidification, humidification by water injection, adiabatic humidification, humidification efficiency, humidification by constant wet bulb temperature, contact factor, and bypass factor. [15 hrs] Humidification by steam injection, adiabatic air mixing, cooling, and dehumidification with reheating, preheating with humidification and reheat. [10 hrs] Air mixing and adiabatic humidification with reheating, summer cycle and winter cycle, practical applications for the case of summer, and practical applications for the case of winter. [15 hrs] Selection of supplied air conditions: removal of sensible heat, specific heat capacity of moisture air, removal of latent heat, inclination of the sensible heat ratio line, heat generated by fan motors, waste reheating, selection of appropriate air supply conditions [6 hrs]

	Part B – Refrigeration cycle Fundamentals Refrigerants, types of old and modern refrigerants, side effects of refrigerants on the ozone layer and global warming, secondary refrigerants, concept of refrigeration: uses of refrigeration and refrigeration methods, second law of thermodynamics, heat pump, reverse Carnot cycle, simple vapor compression cycle, simple vapor compression cycle parts.. [15 hrs] Mathematical analysis of the simple vapor compression cycle, the factors affecting the performance parameter of the vapor compression cycle (the impact of suction temperature, the impact of condensation temperature, the impact of sub-cooling, the impact of superheating, and the impact of pressure losses). Theoretical vapor compression cycle and its comparison with the real one, Improving the vapor compression cycle, Using flash tank, Supercooling of refrigerant.. [7 hrs] Multistage compression: flash gas removal, intercooler, one evaporator and one compressor, two evaporators and one compressor, two compressors and one evaporator. multi-stage compression: two compressors and evaporators, multi-stage compression with several types of inter-cooling (water intercooler, liquid flash intercooler, flash gas intercooler) [15 hrs] Vapor Compression refrigeration cycle components: compressors type, positive displacement compressors, reciprocating compressors, volumetric efficiency, mechanical efficiency, rotary compressors, screw compressors, scroll compressors, centrifugal compressors. Condensers, evaporators, and cooling towers Expansion tools, accessories for vapor compressor cooling system. [15 hrs]

Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus) المنهاج الأسبوعي النظري	
Week	Material Covered
Week 1	The basic properties of a mixture of air and water vapor: components of atmospheric air, general equation of gases, Dalton's law of partial pressures, saturated vapor pressure, water vapor pressure in moist air, relative humidity, moisture content, humidification percentage, dew point, enthalpy, The psychrometric scheme and adaptation processes: a general explanation of the psychrometric chart and the basis for its construction
Week 2	Sensible cooling, sensible heating, dehumidification, humidification by water injection, adiabatic humidification, humidification efficiency, humidification by constant wet bulb temperature, contact factor, and bypass factor.
Week 3	Humidification by steam injection, adiabatic air mixing, cooling and dehumidification with reheating, preheating with humidification and reheat.
Week 4	Air mixing and adiabatic humidification with reheating, summer cycle and winter cycle, practical applications for the case of summer, and practical applications for the case of winter.

Week 5	Comfort and internal conditions: Metabolism and human comfort, body mechanics in heat transfer and thermoregulation, metabolic rate, clothing, the effect of the environment on human comfort, other factors affecting human comfort, and selection of internal conditions.
Week 6	Climate and external conditions: climate, wind, local winds, dew formation, seasonal temperature change, seasonal humidity change, meteorological measurements, seasonal change of the psychometric condition of the external outdoor conditions, selection of external conditions (the three methods).
Week 7	Selection of supplied air conditions: removal of sensible heat, specific heat capacity of moisture air, removal of latent heat, inclination of the sensible heat ratio line, heat generated by fan motors, waste reheating, selection of appropriate air supply conditions
Week 8	Refrigerants, types of old and modern refrigerants, side effects of refrigerants on the ozone layer and global warming, secondary refrigerants, concept of refrigeration: uses of refrigeration and refrigeration methods, second law of thermodynamics, heat pump, reverse Carnot cycle, simple vapor compression cycle, simple vapor compression cycle parts.
Week 9	Mathematical analysis of the simple vapor compression cycle, the factors affecting the performance parameter of the vapor compression cycle (the impact of suction temperature, the impact of condensation temperature, the impact of sub-cooling, the impact of superheating, and the impact of pressure losses).
Week 10	Theoretical vapor compression cycle and its comparison with the real one, Improving the vapor compression cycle, Using flash tank, Supercooling of refrigerant.
Week 11	Multistage compression: flash gas removal, intercooler, one evaporator and one compressor, two evaporators and one compressor, two compressors and one evaporator.
Week 12	Multi-stage compression: two compressors and evaporators, multi-stage compression with several types of intercooling (water intercooler, liquid flash intercooler, flash gas intercooler)
Week 13	Vapor Compression refrigeration cycle components: compressors type, positive displacement compressors, reciprocating compressors, volumetric efficiency, mechanical efficiency, rotary compressors, screw compressors, scroll compressors, centrifugal compressors.
Week 14	Condensers, evaporators, and cooling towers
Week 15	Expansion tools, accessories for vapor compressor cooling system.
Week 16	The preparatory week before the final Exam

Delivery Plan (Weekly Lab. Syllabus) المنهاج الاسبوعي للمختبر	
Week	Material Covered

Week 1	Air velocity measuring devices - measuring air velocity using a Petot tube and a manometer.
Week 2	Applications to the air properties Psychometric Chart.
Week 3	Sensible cooling
Week 4	Sensible heating
Week 5	Dehumidification process
Week 6	Air Humidification by Direct Injection of Water Drops
Week 7	Humidify the air with a jet of steam
Week 8	Air mixing process
Week 9	Cooling and dehumidifying with reheating
Week 10	Preheating, cooling and dehumidifying with reheating
Week 11	Mixing and adiabatic saturation with reheating
Week 12	Theoretical calculations for compressor performance
Week 13	Condenser calculations for vapor compression cycle
Week 14	Calculations of capacity and performance factor for vapor compression cycle
Week 15	Calculations of the coefficient of performance for the real vapor compression cycle

Peer Reviewer Name		Ammar Ali Hussain	e-mail	Drammar@mtu.edu.iq	
Scientific Committee Approval Date		10/06/2023	Version Number	1.0	

Relation with other Modules العلاقة مع المواد الدراسية الأخرى			
Prerequisite module	MPAC108	Semester	L1- S2
Co-requisites module	None	Semester	

Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	This course is the foundation to many advanced techniques that allow engineers to design machine components, mechanisms, predict failure and

	understand the physical properties of materials. Mechanics of Materials gives the student basic tools for stress, strain and deformation analysis. Methods for determining the stresses, strains and deformations produced by applied loads are presented. Engineering design concepts are integrated throughout the course.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1.To apply the formal theory of solid mechanics to calculate forces, deflections, moments, stresses, and strains in a wide variety of structural members subjected to tension, compression, torsion, bending, both individually and in combination, including : • axially loaded bars • components in pure shear • circular shafts in torsion • beams in bending • thin-walled pressure vessels 2. Determine the stresses and strains in members subjected to combined loading and apply the theories of failure for static loading 3. To determine principal stresses and angles, maximum shearing stresses and angles, and the stresses acting on any arbitrary plane within a structural element. 4. Analyze slender, long columns subjected to axial loads 5. Determine the deflections and rotations produced by the flexural loading. 9.
Indicative Contents المحتويات الإرشادية	<i>Indicative content includes the following.</i> Give the students information about stress and strain, [12 hrs] Thermal stress, [12 hrs] Thin Walled stress torsion, [12 hrs] Thin Walled Torsion, [12 hrs] Shear force and bending moment diagram, [12 hrs] complex stress , [12 hrs] Mohr's circle. [12 hrs] Sum. $7 \times 12 = 84$ with lab. Part test for tensile, [4 hrs] impact, [4 hrs] hardness , [4 hrs] creep , [4 hrs] compression, [4 hrs] bending , [4 hrs] buckling , [4 hrs] torsion [4 hrs] sum. $4 \times 8 = 32$

	TOTAL Structured SWL (h/sem)=84+32=116

Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims	The module aims to: 1. Security and Networking: • Understand the basic concepts and components of computer networks. • Gain knowledge of network security principles and threats. • Develop skills in network troubleshooting and problem-solving. 2. E-Commerce: • Familiarize with the concepts and services of electronic banking. • Understand the different modes of online banking, such as ATM, debit cards, phone banking, SMS banking, and mobile banking. 3. Computer Troubleshooting: • Develop the ability to identify and solve common hardware and software issues faced by computer users. • Learn basic troubleshooting techniques and tools for diagnosing and resolving computer problems. 4. Introduction to AI: • Understand the definition and history of artificial intelligence. • Explore the various AI techniques and approaches. • Recognize the challenges and ethical considerations in AI
Module Learning	1. Security and Networking: • Understand the basic concepts of computer networks and their components

Outcomes	• Gain knowledge of network security principles and be able to identify network threats • Develop troubleshooting skills to diagnose and resolve network issues 2. E-Commerce: Comprehend the concepts and services of electronic banking, including online banking, ATM, debit cards, phone banking, SMS banking, and mobile banking 3. Computer Troubleshooting: • Ability to identify and solve common hardware and software problems encountered by computer users • Demonstrate proficiency in using basic troubleshooting techniques and tools 4. Introduction to AI: • Define and explain the concept of artificial intelligence • Understand the history and evolution of AI • Explore various AI techniques and approaches • Recognize the challenges and ethical considerations in AI development and deployment 5. AI in Our Daily Lives: Understand the applications of AI in smartphones and virtual assistants 6. Applications of AI: Identify and analyze the use of AI in various domains, such as education, healthcare, finance, transportation, marketing, and advertising 7. AI and Society: • Examine the social, international, and future implications of AI • Understand how AI affects human society and the future of humanity 8. Ethical Challenges in AI: Identify and discuss the ethical considerations in AI, including privacy, surveillance, and the impact on the job market 9. The Future of AI: Explore future trends and emerging technologies in the field of artificial intelligence.
Indicative Contents	The indicative contents for the Computer Application module may include: 1. Security and Networking: [4 hrs.] • What is a network? • Types of networks. • Basic network components. • Network security basics. • Understanding network threats. • Network troubleshooting. 2. E-Commerce: [4 hrs.] • Concepts of electronic banking services. • Online banking. • ATM and debit card services. • Phone banking. • SMS banking. • Electronic alert. • Mobile banking. 3. Computer Troubleshooting: [4 hrs.] • Identifying and solving common hardware and software problems that computer users encounter.

	• Basic troubleshooting techniques and tools for diagnosing and resolving issues. 4. Introduction to AI: [4 hrs.] • Definition of AI. • History of AI. • AI techniques and approaches. • Challenges and ethical considerations in AI. 5. AI in Our Daily Lives: [4 hrs.] • AI in smartphones and virtual assistants like Siri or Google Assistant. 6. Applications of AI: [4 hrs.] • Education. • Healthcare. • Finance. • Transportation. • Marketing. • Advertising. 7. AI and Society: [4 hrs.] • How AI affects social, international relations. • AI and the future of humanity. 8. Ethical Challenges in AI: [4 hrs.] • AI ethics. • Privacy and surveillance. • The impact of AI on the job market. 9. The Future of AI: [4 hrs.] • Future trends in AI. • Recent research and emerging technologies

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	The learning and teaching strategies employed in the computer application content that will be used .: 1. Lectures: Lectures serve as the primary mode of content delivery, where instructors present key concepts, theories, and techniques. Lectures may include visual aids, examples, and demonstrations to enhance understanding and provide real-world context. 2. Interactive Discussions: Interactive discussions encourage student participation and facilitate deeper understanding of the material. Students are encouraged to ask questions, share their insights, and engage in discussions on specific topics or problem- solving strategies. 3. Case Studies and Real-world Applications: Case studies and real-world applications demonstrate the relevance of mathematics in various fields. Students analyze and solve mathematical problems based on real-life scenarios, enabling them to connect theoretical concepts with practical applications. 4. Computer-based Learning: Computer-based learning resources, such as

	online tutorials, interactive simulations, and mathematical software, are utilized to enhance students' understanding and proficiency in applying mathematical techniques. 5. Group Projects: Group projects promote teamwork, communication, and problem-solving skills. Students work collaboratively on mathematical projects or research assignments, allowing them to explore advanced topics or applications of mathematics. 6. Self-directed Learning: Students are encouraged to take responsibility for their learning by engaging in self-directed study. This may involve reading recommended textbooks, exploring additional resources, and practicing problem-solving independently. 7. Assessments: Regular assessments, including quizzes, tests, and assignments, evaluate students' understanding and application of mathematical concepts. These assessments provide feedback and help track progress throughout the module.

Syllabus (Weekly Plan Delivery) المناهج الأسبوعي النظري	
	Material Covered
Week 1	Security and Networking: What is a network? Types of networks, basic network components, network security basics, network troubleshooting.

Week 2	E-Commerce: Concepts of electronic banking services, including online banking, ATM and debit card services, phone banking, SMS banking, electronic alert, and mobile banking.
Week 3-4	Computer Troubleshooting: Identifying and solving common hardware and software problems that computer users encounter, including basic troubleshooting techniques and tools.
Week 5-6	Introduction to AI: Definition of AI, history of AI, AI techniques and approaches, challenges and ethical considerations.
Week 7	Review and Mid Exam
Week 8-9	AI in Our Daily Lives: AI in smartphones and virtual assistants like Siri or Google Assistant.
Week 10-12	Applications of AI: Education, healthcare, finance, transportation, marketing, and advertising.
Week 13	AI and Society: How AI affects social, international relations, and the future of humanity.
Week 14	Ethical Challenges in AI: AI ethics, privacy, surveillance, and the impact of AI on the job market. The Future of AI: Future trends in AI, recent research, and emerging technologies.
Week 15	Final Exam

Delivery Plan (Weekly Lab. Syllabus) المنهاج الأسبوعي للمختبر	
Week	Material Covered
Week 1	Introduction to Networking - Setting up a basic network using routers and switches - Identifying different types of networks (LAN, WAN, etc.) - Overview of network components (cables, connectors, etc.)
Week 2	Network Security Basics - Implementing basic security measures (firewalls, antivirus) - Conducting a risk assessment for a sample network - Exploring network security tools and software
Week 3	E-Commerce Services - Simulating online banking transactions - Setting up an ATM simulator - Exploring mobile banking applications
Week 4	Computer Troubleshooting Techniques - Hands-on troubleshooting of common hardware issues - Software troubleshooting exercises using diagnostic tools - Documenting troubleshooting procedures

Week 5	Introduction to AI - Exploring AI development environments (e.g., TensorFlow, PyTorch) - Basic programming exercises in AI (e.g., simple algorithms) - Discussion on the ethical considerations of AI
Week 6	AI in Daily Life - Analyzing the functionality of virtual assistants (Siri, Google Assistant) - Creating simple AI-based applications (chatbots, etc.) - Evaluating user interactions with AI technologies
Week 7	Applications of AI - Case studies on AI applications in healthcare and finance - Developing a simple AI model for a specific application (e.g., predictive analysis) - Group discussions on marketing and advertising with AI
Week 8	AI and Society - Research project on the societal impact of AI technologies - Group presentations on international relations affected by AI - Discussion on the future implications of AI
Week 9	Ethical Challenges in AI - Debating ethical scenarios related to AI applications - Analyzing case studies of AI ethics violations - Discussing privacy issues and surveillance implications
Week 10	The Future of AI - Researching recent advancements in AI technologies - Group projects on emerging technologies in AI - Presentations on future trends and predictions in AI
Week 11	Review and Mid Exam - Review of key concepts and practical skills learned - Mock exam scenarios and feedback sessions - Q&A sessions to clarify any doubts
Week 12-15	Preparatory Week for Final Exam - Comprehensive review of all topics covered in the course - Final project presentations - Discussion on exam strategies and key focus areas

Co-requisites module	None	Semester	

Module Aims, Learning Outcomes and Indicative Contents	
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	The goal is to study English language and gain knowledge of it as benefit engineers in general, and to develop speaking skills and understand its basic rules taking the way to the acquisition of the ability to use technical key words in their work and the capability of communicating with other engineers

	correctly
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	Developing speaking skills and understanding its basic rules to take the way to the acquisition of the ability to use technical keywords in their work and the capability of communicating with other engineers correctly .
Indicative Contents المحتويات الإرشادية	Through the prepared syllabus, the student acquires the ability to understand grammar English language through weekly lectures and classes in a gradual and sequential manner for a period of four years, starting from the first stage, such as interrogative, negative, formation of sentences, parts of speech, and others.

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	Type something like: The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
--	--

Module Aims أهداف المادة الدراسية	أهداف المادة الدراسية هي اني يكون الطالب قادراً على أن: 1. يتعرف على ماهية التعبير القرآني. 2. يتعلم القواعد النحوية المستعملة في التعبير القرآني، والأثر البلاغي والفني الذي يترتب على كيفية التعبير القرآني، وأن يفهم الطالب كيفية التحليل للنصوص القرآنية. 3. يتعرف على شخصية من أهم شخصيات الأدب والشعر العربي والعراقي، بدر شاكر السياب، ومعرفة شعره. 4. ويتعلم استعمالها في اللغة العربية، ويفهم يتعرف على علامات الإعراب الأصلية والفرعية، الفرق بين علامات الإعراب الفرعية والأصلية. 5. يتعلم الفرق بين الجمل الأسمية والفعلية، ويتعرف على أنواع المبتدأ، وأنواع الخبر، ويفهم الفرق بينهما. 6. ويتعلم القواعد الخاصة بها، يتعرف على إن وأخواتها. 7. يفهم الفرق بين إنَّ و أنَّ، وأنَّ، وأنْ، ويطبق ذلك عند استعمال كل منها في النصوص. 8. يتعرف على كان وأخواتها، ويتعلم عمل كل منها في اللغة، ويتمكن من استعمالها الصحيح في اللغة. 9. ويستطيع استعمالها بشكل صحيح في علامات إعرابها، يتعرف على عمل الأفعال الخمسة، الخطاب، أو النص. 10. يتعرف على الأخطاء اللغوية، ويتعلم تجنبها أثناء الكتابة. 11. والفرق اللغوية، والمعاملات النحوية، ويفهم يدرس معلومات لغوية: الأضداد والمرادفات، الفرق بينها، ويتمكن من تحليلها. 12. يتعلم إعراب المثنى. 13. يتعرف على أنواع الجموع، ويتعلم التفريق بينها، ويفهم كيفية إعرابها. 14. يتعلم كيفية كتابة قواعد اللغة العربية في لوحة بيانية، ويتمكن من تصويب الأخطاء اللغوية.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	مخرجات التعلم للمادة الدراسية هي: 1. قدرة الطالب على فهم التعبير القرآني، وتحليل النصوص. 2. وفهم الأساليب البلاغية والقدرة على استعمالها. القدرة على استخدام القواعد النحوية، وآثاره. 3. معرفة الطالب لشخصية الشاعر والأديب بدر شاكر السياب، وأهم أشعاره. 4. القدرة على التمييز بين علامات الإعراب الأصلية والفرعية، والقدرة على استعمالها في الخطاب، أو النص. 5. قدرة الطالب على التمييز بين الجمل الأسمية والفعلية، وقدرته على التمييز بين أنواع المبتدأ، والخبر، وكيفية استعمال الجمل وإعرابها. 6. فهم الطالب لعمل إنَّ وأخواتها، وقدرته على استعمالها بشكل صحيح في الجمل. 7. القدرة على التفريق بين أنَّ وإنَّ، وإنَّ وأنَّ، واستعمالها في مواضعها الصحيحة في النصوص. 8. القدرة على فهم عمل كان وأخواتها، واستعمالها بشكل صحيح. 9. التمكن من معرفة وأعراب الأفعال الخمسة، وكيفية استعمالها في الجمل. 10. القدرة على معرفة وتجنب الأخطاء اللغوية عند الكتابة. 11. معرفة إعراب المثنى. 12. القدرة على التمييز بين الجموع، وكيفية إعرابها، واستعمالها في الجمل. 13. معرفة الطالب لمعلومات لغوية: المرادفات. والأضداد، والفرق اللغوية، والمعادلات النحوية، والقدرة على استخراجها، أو استعمالها في الجمل.

Indicative Contents المحتويات الإرشادية	المحتويات الإرشادية في مادة اللغة تشمل مجموعة من المفاهيم والمواضيع التي يتم تغطيتها خلال عملية التعلم. ومن بين المحتويات الإرشادية المهمة: 1. وجمالية اللغة مقدمة عن التعبير القرآني، وتعريف بالإعجاز اللغوي في آيات القرآن الكريم العربية وبلاغتها. (4 ساعات) 2. التعريف بشخصية الشاعر الكبير بدر شاكر السياب ، وأهمية شعره في الأدب العربي (4 ساعات).والعراقي 3. (4 ساعات).دراسة علامات الإعراب ، بنوعها ، وكيفية الأعراب 4. دراسة الجمل الأسمية والفعلية ، وتعلم التفريق بين الأنواع المبتدأ ، وأنواع الخبر. (4 ساعات) 5. (4 ساعات).دراسة إن وأخواتها ، وكيفية عملها وأعرابها 6. دراسة الفرق بين إن وأن، وإن وأن، وكيفية عملها وأعرابها. (4 ساعات) 7. (4 ساعات).دراسة كان وأخواتها ، وكيفية عملها وإعرابها 8. (4 ساعات).التعريف بالأفعال الخمسة ، وعملها وإعرابها. 9. دراسة الأخطاء اللغوية الشائعة وتطبيقاتها في النصوص. (4 ساعات) 3. تعلم المعلومات اللغوية : الأضداد والمترادفات، والفرق اللغوية ، والمعادلات النحوية (3 ساعات) 11. دراسة المثنى وأعرابه. (3ساعات) 12. دراسة الجموع ، وأنواعها وإعرابها. (3 ساعات) (3 ساعات).دراسة القواعد النحوية وكتابتها في رسم بياني ، وتصويب الأخطاء اللغوية
---	---

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	استراتيجيات التعلم والتعليم المستخدمة في مادة اللغة تشمل مجموعة متنوعة من النهج والتقنيات التي تعزز عملية التعلم للطلاب. من بين هذه الاستراتيجيات: 1. التفاعل النشط: يتم تشجيع الطلاب على المشاركة والمشاركة الفعالة في الدروس من خلال المناقشات الجماعية والأنشطة التفاعلية. 2. التعلم التعاوني: يشجع التعاون والتعاون بين الطلاب من خلال العمل الجماعي والمشاريع الجماعية، حيث يتعاون الطلاب مع بعضهم البعض لتحقيق أهداف التعلم المحددة. 3. التطبيق العملي: يتم توفير فرص للطلاب لتطبيق المفاهيم والمهارات المكتسبة في سياقات عملية وواقعية، مما يعزز التفاعل الفعال مع المادة. 4. استخدام التقنيات الحديثة: يستفيد الطلاب من استخدام التكنولوجيا في عملية التعلم، مثل استخدام الحواسيب والإنترنت للبحث والتعلم الذاتي. 5. توفير ردود فعل فورية: يتم توفير ردود فعل فورية وتقييم مستمر للطلاب، سواء عن طريق التقييمات الشفهية أو الكتابية، مما يساعدهم على تحسين أدائهم وتطوير مهاراتهم. 6. التنوع في وسائل التواصل: يتم استخدام مجموعة متنوعة من وسائل التواصل والتعليم، مثل المحاضرات التوضيحية، والمناقشات الجماعية، والأنشطة العملية، والعروض التقديمية، لتلبية احتياجات وأساليب التعلم المختلفة للطلاب. 7. باستخدام هذه الاستراتيجيات، يتم تعزيز التفاعل والتعلم الفعال للطلاب، 8. تحفيزهم على المشاركة واكتساب المعرفة والمهارات بشكل شامل وشيق.

Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	

Module Aims أهداف المادة الدراسية	This course aims to provide a good knowledge to the students about the Engineering and numerical analysis with understand the basis of solutions and their application in different branches of engineering / mechanical, material, Civil and power.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	10. Understand the methods of solutions for first, second and high orders differential equations and their engineering applications. 11. Understand the types and method of solution for Fourier Series and their engineering applications. 12. Understand the methods of solution by Laplace transformation and their applications. 13. Understand the methods of solution for partial differential equation and their engineering application. 14. Understand the numerical methods for solving linear and non-linear equations and their engineering applications. 15. Understand the numerical methods for solving the differential equations and their engineering applications.
Indicative Contents المحتويات الإرشادية	<i>Indicative content includes the following.</i> Give the students information about : Differential Equations. First, 2nd and, Higher Linear Order Differential Equations, [12hrs] Fourier series, [10hrs] Laplace and Laplace Inverse transformation, [12hrs] Euler equation, [10hrs] Runge-Kutta method, [10hrs] interpolation, [10hrs] iteration, [10hrs] partial Differential Equations[13hrs] TOTAL Structured SWL (h/sem)=87
Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the

students.

Prerequisite module		Semester	
Co-requisites module	None	Semester	

Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims	10. To identify and enumerate different link based mechanisms with basic understanding of motion. 11. To understand and illustrate various power transmission mechanisms using suitable method. 12. The knowledge of this subject is very essential for an engineer in designing the various parts of a machine. 13. Vibration analysis is a process of looking for anomalies and monitoring change from the established vibration signature of a system. The vibration of any object in motion is characterized by variations of amplitude, intensity, and frequency. 14. Vibration is highly applicable for investigating the operational conditions and status of rotating machinery and structures. Vibrations can be represented in different forms, including displacement, velocity and acceleration.
Module Learning Outcomes	Upon completion of the course, students should be able to: 1. Balance the rotating masses to reduce (or even eliminating) the unbalanced forces and couples in a mechanical system. 2. Learn and understand how the motion can be transmitted by two or more toothed wheels.

	3. Learn that there are many types of governors and the main function of a governor is to regulate the mean speed of an engine within certain limits, when there are variations in the load. 4. The student will learn how the belts or ropes are used to transmit power from one shaft to another by means of pulleys which rotate at the same speed or at different speeds. 5. Learn to calculate the braking torque for different types of brake, and learn how to dealing with the braking of a vehicle. 6. Learn general information about the cam, and also learn the type of motion of follower. 7. Understand the engineering principles in mechanical system to identify. 8. Formulate and solve the problem of mechanical engineering. 9. Able to find the source of engineering problems in mechanical system through research that includes identification, formulation, analysis, data interpretation based on engineering principles. 10. Able to formulate the solution of engineering problem in mechanical system by considering economy, safety, environment and energy conservation. 11. Analyze mechanical vibration on 1 and 2 degree of freedom system. 12. Explain basic concept of free body diagram and vibration mathematics model system. 13. Formulate movement equation and analyze vibration respond from undamped and damped in free and forced excitation with various excitation.
Indicative Contents	Indicative content includes the following. Balancing of a Single Rotating Mass by a Single Mass Rotating in the Same Plane, balancing of a Single Rotating Mass by Two Masses Rotating in Different Planes, Balancing of Several Masses Rotating in the Same Plane Using Analytical and Graphical Methods, Balancing of Several Masses Rotating in Different Planes. [4 hrs] Classification of Gears, Spur Gears, Velocity Ratio (Gear Ratio), Center to Center Distance, Gear Trains, Velocity Ratio of Simple Gear Trains, Velocity Ratio of Compound Gear Trains, Epicyclic Gear Trains, Simple Epicyclic Gear Trains, Compound Epicyclic Gear Trains. [4 hrs] Types of Governors, Watt Governor, Porter Governor, Proell Governor, Hartnell Governor. [4 hrs] Types of Belts, Types of Flat Belt Drive, Selection of Belt Drive, Velocity Ratio of Open Belt Drive, Effect of Belt Thickness on Velocity Ratio, Slip of the Belt, Velocity Ratio of a Compound Belt Drive, Length of Open and Cross Belt, Ratio of Driving Tension for Flat Belts, Determination of Angle of

	Contact for Open and Cross belt., Power Transmitted by a Belt, Centrifugal Tension, Maximum Tension in the Belts, Initial Tension in the Belt, V – Belt Drive and Rope Drive. [4 hrs] Types of Brakes, Simple Block or Shoe Brake (Single and Double Block), Band Brake (Simple and Differential Band Brake), Band and Block Brake, The Braking of a Vehicle. [4 hrs] Types of Followers, Nomenclatures for Cam Profile, Motions of the Follower, Uniform Motion or Uniform Velocity of a Follower, Simple Harmonic Motion of Follower, Uniform Acceleration and Uniform Retardation, Cam profile construction. [4 hrs] Basic concepts of vibration, Oscillatory motion, Second Order Differential Equations with Constant Coefficients. [4 hrs] Undamped Free Vibrations of Single degree of Freedom Systems, Torsional Oscillation of Elastic Shafting, Energy Methods. [4 hrs] Damped Free Vibrations of Single degree of Freedom Systems, Logarithmic Decrement, Forced Vibrations of Undamped Single Degree of Freedom Systems, Force Vibrations of Damped Single Degree of Freedom Systems, Forced Angular Oscillations of Rigid Bodies. [4 hrs] Influence of Frequency Ratio and Damping Factor on Steady State Response, Force Transmission and Vibration Isolation. [2 hrs] Natural Frequency of Transverse Vibrations of Shafts or Beams Under Different Types of Loads and End Conditions, Natural Frequency of Transverse Vibration of a System of Several Loads Attached to the Same Shaft (Energy and Dunkerley's Methods). [2 hrs] Whirling Speeds or Critical Speeds. [2 hrs] Free Vibrations of Undamped Systems with Two Degree of Freedom. [2 hrs] Free Vibrations of Damped Systems with Two Degree of Freedom. [2 hrs] Forced Vibrations for Systems with Two Degree of freedom. [2 hrs] Natural Frequency of Free Torsional Vibrations, Free Torsional Vibrations of a Single Rotor System, Free Torsional Vibrations of a Two Rotor System. [2 hrs] Free Torsional Vibrations of a Three Rotor System, Torsional Equivalent Shaft. [2 hrs]

Week	Material Covered
Week 1	Balancing of Rotating Masses Balancing of a Single Rotating Mass by a Single Mass Rotating in the Same Plane Balancing of a Single Rotating Mass by Two Masses Rotating in Different Planes Balancing of Several Masses Rotating in the Same Plane (a) Analytical Method (b) Graphical Method Basic concepts of vibration Oscillatory motion. (a) Harmonic motion. (b) Periodic motion. Vibration terminology.
Week 2	Balancing of Several Masses Rotating in Different Planes Solve Problems. Second Order Differential Equations with Constant Coefficients. Solve Problems. Undamped Free Vibrations of Single degree of Freedom Systems. (a) Simple Harmonic Oscillation (Equilibrium Method). (b) Angular Oscillations of Rigid Bodies.

	Torsional Oscillation of Elastic Shafting. Solve Problems.
Week 3	Classification of Gears Spur Gears Velocity Ratio (Gear Ratio) Center to Center Distance Gear Trains Velocity Ratio of Simple Gear Trains Velocity Ratio of Compound Gear Trains Solve Problems
Week 4	Epicyclic Gear Trains Simple Epicyclic Gear Trains Compound Epicyclic Gear Trains Energy Methods. Equivalent Spring Constants. Solve Problems.
Week 5	Solved Problems Damped Free Vibrations of Single degree of Freedom Systems. Logarithmic Decrement. Forced Vibrations of Undamped Single Degree of Freedom Systems. Solve Problems.
Week 6	Types of Governors Watt Governor Porter Governor (a) Equilibrium Method (b) Instantaneous Center Method Solve Problems Vibrations of Damped Single Degree of Freedom Systems. Forced Angular Oscillations of Rigid Bodies. Solve Problems.
Week 7	Proell Governor Hartnell Governor Solve Problems Influence of Frequency Ratio and Damping Factor on Steady State Response. Force Transmission and Vibration Isolation. Base Excitation.
Week 8	Types of Belts Types of Flat Belt Drive Selection of Belt Drive Velocity Ratio of Open Belt Drive Effect of Belt Thickness on Velocity Ratio Slip of the Belt Velocity Ratio of a Compound Belt Drive

	Length of Belt (a) Open Belt (b) Cross Belt Ratio of Driving Tension for Flat Belts Natural Frequency of Transverse Vibrations of Shafts or Beams Under Different Types of Loads and End Conditions. (a) Natural Frequency of a Shaft Carrying a Single Concentrated Load. (b) Natural Frequency of a Shaft Carrying a Uniformly Distributed Load. Natural Frequency of Transverse Vibration of a System of Several Loads Attached to the Same Shaft. (a) Energy or (Rayleigh's) Method. (b) Dunkerley's Method. Solve Problems.
Week 9	Determination of Angle of Contact (a) Open Belt (b) Cross Belt Power Transmitted by a Belt Centrifugal Tension (T_c) Maximum Tension in the Belts (T_{max}) Condition for the Transmission of Maximum Power Initial Tension in the Belt (T_o) V – Belt Drive and Rope Drive Whirling Speeds or Critical Speeds. Solve Problems.
Week 10	Solve Problems Free Vibrations of Undamped Systems with Two Degree of Freedom. Solve Problems.
Week 11	Types of Brakes Simple Block or Shoe Brake (a) Single Block or Shoe Brake (b) Double Block or Shoe Brake Band Brake (a) Simple Band Brake Differential Band Brake Free Vibrations of Damped Systems with Two Degree of Freedom. Solve Problems.
Week 12	Band and Block Brake Internal Expanding Shoe Brake The Braking of a Vehicle (a) Value of Retardation When the Brakes are Applied to Rear Wheels Only (b) Value of Retardation When the Brakes are Applied to Front Wheels Only (c) Value of Retardation When the Brakes are Applied to All the Wheels Solve Problems Forced Vibrations for Systems with Two Degree of freedom. Solve Problems.

Week 13	Types of Followers Nomenclatures for Cam Profile Motions of the Follower (a) Uniform Motion or Uniform Velocity of a Follower Free Torsional Vibrations of a Three Rotor System. Torsional Equivalent Shaft. Solve Problems.
Week 14	(b) Simple Harmonic Motion of Follower (c) Uniform Acceleration and Uniform Retardation Cam profile construction Free Torsional Vibrations of a Three Rotor System. Torsional Equivalent Shaft. Solve Problems.
Week 15	Solve Problems

Delivery Plan (Weekly Lab. Syllabus) المنهاج الاسبوعي للمختبر	
Week	Material Covered
Week 1	Lab 1: How to balance rotating masses. Mass – Spring system.
Week 2	Lab 2: How to get force equilibrium. Simple and Compound Pendulums.
Week 3	Lab 3: Explain the principle work of gear and gear train. Mass Moment of Inertia Estimation-Part one: Bifilar Suspension.
Week 4	Lab 4: Explain the principle work of governor. Mass Moment of Inertia Estimation-Part two: Auxiliary Mass Method.
Week 5	Lab 5: How plane surface friction calculated. Undamped Forced Vibration.
Week 6	Lab 6: Explain friction of flat belt. Transverse Vibration of a Beam.
Week 7	Lab 7: How frictional clutch operate. Undamped vibration absorber.

MODULE DESCRIPTION FORM

نموذج وصف المادة الدراسية

Module Information			
معلومات المادة الدراسية			
Module Title	Heat Transfer		Module Delivery
Module Type	C		☐ Theory ☒ Lecture ☒ Lab ☐ Tutorial ☐ Practical ☐ Seminar
Module Code	MPAC303		
ECTS Credits	8		
SWL (hr/sem)	200		
Module Level	3	Semester of Delivery	
Administering Department	Mechanical Power Eng. Dep.	College	TCB

Relation with other Modules			
العلاقة مع المواد الدراسية الأخرى			
Prerequisite module		Semester	
Co-requisites module	None	Semester	

Module Aims, Learning Outcomes and Indicative Contents	
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	

Module Aims	15. To develop students' fundamental knowledge into Heat transfer principles. 16. To describe the physical principles and evolving technical capabilities of heat transfer 17. To explain the heat transfer mechanisms, conduction, convection, and radiation. 18. To describe the thermal resistance concept, conduction through multilayered plane wall, cylinders and spheres. 19. To describe the Heat transfer from finned surfaces, fin equation, fin Efficiency, fin effectiveness. 20. To explain the forced and natural convection heat transfer, boundary layer concepts. 21. To describe the kinds of heat exchangers, heat exchangers design methods. 22. To explain the heat transfer by radiation basic concepts.
Module Learning Outcomes	Upon completion of the course, students should be able to: 16. Use the information of heat transfer principles. 17. Identify the heat transfer mechanisms. 18. Recognize the forced and natural convection heat transfer. 19. Recognize the kinds of heat exchangers and design methods. 20. Recognize the heat transfer by radiation basic concepts. 21. Use the heat transfer principles in the practical applications.
Indicative Contents	Indicative content includes the following: Heat transfer principles [16hrs]. Introduction to heat transfer mechanisms, conduction, convection, and radiation [16hrs]. Thermal resistance concept, conduction through multilayered plane wall, cylinders and spheres [28hrs]. Heat transfer from finned surfaces, fin equation, fin Efficiency, fin effectiveness [16hrs]. Forced and natural convection heat transfer, boundary layer concepts [28hrs]. Heat transfer by radiation basic concepts [24hrs].

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	Assessment is based on hand-in assignments, written exam, Case study, Quizzes, seminars, Practical testing and Online testing.

Delivery Plan (Weekly Syllabus) المنهاج الاسبوعي النظري محتوى كل اسبوع يجب ان يغطي الوقت المحدد	
Week	Material Covered
Week 1	Introduction, Heat Transfer Mechanisms, Steady State general Heat Conduction equation in Rectangular, Cylindrica and spherical Coordinates.
Week 2	Thermal Resistance Concept, Conduction through Multilayered Plane Wall, Cylinders and Spheres.
Week 3	Over all Heat Transfer Coefficient, Critical Radius of Insulation. Thermal Contact Resistance.
Week 4	Heat transfer from finned surfaces, fin equation, fin Efficiency, fin effectiveness
Week 5	Transient Heat Conduction, (Lumped System Analysis) Two-dimensional Steady Heat Conduction, numerical method.
Week 6	Introduction to Heat Transfer by Convection, Review to the Fluid Flow.
Week 7	Non-Dimensional Group Numbers Analysis, Laminar and Turbulent flow.
Week 8	External Forced Convection (on Flat Plate), Boundary layer concept, Empirical Equations
Week 9	Internal Forced Convection (Laminar and Turbulent Flow), Empirical Equations.
Week 10	Natural Convection Heat Transfer, Empirical Equations.
Week 11	Introduction to Heat Exchangers, Kinds of Heat Exchangers

Week 12	The Overall Heat Transfer Coefficient, Fouling Factor, The Log Mean Temperature Difference (LMTD) Method
Week 13	Effectiveness- NTU method, Performanc for Different Kinds of the Heat Exchangers.
Week 14	Heat Radiation, Introduction, Basic Concepts, Absorptivity, Reflectivity, and Transmissivity.
Week 15	Radiation Heat Transfer Between Two Black and Gray Surfaces.

Delivery Plan (Weekly Lab. Syllabus) المنهاج الاسبوعي للمختبر	
Week	Material Covered
Week 1	Lab 1: Calculation of thermal conductivity
Week 2	Lab 2: Calculation of heat transfer rate.
Week 3	Lab 3: Calculation of thermal contact resistance
Week 4	Lab 4: Heat transfer in long straight fins
Week 5	Lab 5: Estimating the convection heat transfer coefficient in fins
Week 6	Lab 6: Forced convection from a cylinder in a cross flow
Week 7	Lab 7: Free convection from a cylinder in free flow
Week 8	Lab 8: Parallel flow shell and tube heat exchanger performance
Week 9	Lab 9: Counter flow shell and tube heat exchanger performance
Week 10	Lab 10: Heat Transfer by Radiation

Module Information معلومات المادة الدراسية		
Module Title	Refrigeration and Air Conditioning-2	Module Delivery
Module Type	C	☐ Theory ☒ Lecture ☐ Lab ☐ Tutorial
Module Code	MPAC304	
ECTS Credits	10	

SWL (hr/sem)	250	☐ Practical ☐ Seminar	
Module Level		Semester of Delivery	5
Administering Department	Mechanical Power Eng. Dep.	College	TCB

Relation with other Modules العلاقة مع المواد الدراسية الأخرى			
Prerequisite module	MPAC205	Semester	4
Co-requisites module		Semester	2

Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	This topic aims to enable and qualify the student to know the heating, ventilation, and air conditioning systems, estimate the cooling and heating load, identify the pipe and duct design, select fans and pumps, etc., and estimate the refrigeration load of the food storage stores and diseases that affect food products during the storage period.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	Course Outcomes: 1. To apply the knowledge of mathematics, science, and engineering fundamentals 2. To model refrigeration and air conditioning engineering. 3. 2. To study the design procedures of cooling load, heating load, duct design, piping design, food preservation and food microbiology diseases. 4. To study the design of cold store refrigeration load. 5. To know the software that related to the subject.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. Part A Cooling and heating load estimation Site survey of air conditioned space, relation between heat gain and cooling

load.

Inside and outside design conditions, for winter & summer, heating load calculation (heat loss from windows, doors, walls, roof, floor, base of building, ventilation (air change method, air required for each person, air volume per unit area,) infiltration (crack method) total heating load, Cooling load (radiation glasses, conduction heat transfer through walls, roof, glasses,..etc using equivalent temperature deference,)

Heat transfer through part ions, peoples heat generated, people metabolic rate, lighting heat, motors & equipment, ventilation and infiltration load.

Room total load, zone load, building load, bypass factor, cooling coil temperature.

Heating load estimation, outdoor load, indoor load, ventilation and infiltration load. [30 hrs]

Part B

Duct design and fans selection

Air ducting (pressure loses in straight duct, duct fittings (sudden enlargement & contraction, branches, bends,etc)

Duct design, methods of design, equal friction method, balancing of duct system.

Fans (type, selection, performance of centrifugal, laws) room air distribution, selection of supply & return air opening, diffusers, grilles, return grilles.) [18 hrs]

Part C

Piping and pumps selection

Water piping design, pressure losses in straight, and other links, valves, and accessories, cooling water pipes, water pipe network design.

Pumps (performance, types, pump selections, design of water distribution system , design of expansion tank) [12 hrs]

Part D

Food Preservation

Food thermal properties, water contain, primary freezing point, ice fraction, density, specific heat.

	Freezing and nonfreezing foods, thermal conductivity, parallel method, respiration heat, heat transfer coefficient of surface. Time of Food cooling and freezing. Estimation of Food cooling Time depending on dimensionless heat transfer coefficient, method of freezing estimation. Blank Equation for freezing time estimation. Refrigeration and the food decreases, biological decreases sources, microbes growth, critical growth requirement of microbes, control of microbes growth, HACCP method [18 hrs] Part E Refrigeration Load Thermal load of transportation, air filtration, equipment, safety factor, total ref. load, principle of freezing storage design, volume calculation, design of the storage construction, storage requirement. Methods of construction, space requirement, treatment of air and vapor infiltration from cracks, floor structure, preparing of the roof, water derange, Freezing systems, fan coil unit, valve selection, valve position, system design, Refrigerators [12 hrs]
Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	Type something like: The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

Delivery Plan (Weekly Syllabus) المنهاج الاسبوعي النظري	
Week	Material Covered
	Cooling and heating load estimation
Week 1	Site survey of air conditioned space, relation between heat gain and cooling load. Inside and outside design conditions, for winter & summer, heating load calculation (heat loss from windows, doors, walls, roof, floor, base of building, ventilation (air change method, air required for each person, air volume per unit area,) infiltration (crack method) total heating load.
Week 2	Cooling load (radiation glasses, conduction heat transfer through walls, roof, glasses,..etc using equivalent temperature deference,)
Week 3	Heat transfer through part ions, peoples heat generated, people metabolic rate, lighting heat, motors & equipment, ventilation and infiltration load.
Week 4	Room total load, zone load, building load, bypass factor, cooling coil temperature.
Week 5	Heating load estimation, outdoor load, indoor load, ventilation and infiltration load.
	Duct design and fans selection
Week 6	Air ducting (pressure loses in straight duct, duct fittings (sudden enlargement & contraction, branches, bends,etc)
Week 7	Duct design, methods of design, equal friction method, balancing of duct system.
Week 8	Fans (type, selection, performance of centrifugal, laws) room air distribution, selection of supply & return air opening, diffusers, grilles, return grilles.)
	Piping and pumps selection
Week 9	Water piping design, pressure losses in straight, and other links, valves, and accessories, cooling water pipes, water pipe network design.
Week 10	Pumps (performance, types, pump selections, design of water distribution system , design of expansion tank)
	Food Preservation
Week 11	Food thermal properties, water contain, primary freezing point, ice fraction, density, specific heat. Freezing and nonfreezing foods, thermal conductivity, parallel method, respiration heat, heat transfer coefficient of surface.

Week 12	Time of Food cooling and freezing. Estimation of Food cooling Time depending on dimensionless heat transfer coefficient, method of freezing estimation.
Week 13	Blank Equation for freezing time estimation. Refrigeration and the food decesses, biological decesses sources, microbes growth, critical growth requirement of microbes, control of microbes growth, HACCP method.
	Refrigeration Load
Week 14	Thermal load of transportation, air filtration, equipment, safety factor, total ref. load, principle of freezing storage design, volume calculation, design of the storage construction, storage requirement,
Week 15	Methods of construction, space requirement, treatment of air and vapor infiltration from cracks, floor structure, preparing of the roof, water derange, Freezing systems, fan coil unit, valve selection, vale position, system design, Refrigerators.
Week 16	Preparatory week before the final Exam

Delivery Plan (Weekly Lab. Syllabus) المنهاج الاسبوعي للمختبر	
Week	Material Covered
Week 1-3	Case study for cooling load estimation, each student will select a house map and achieving the cooling load for the given house
Week 4-5	Case study for heating load estimation, each student will select a house map and achieving the cooling load for the given house
Week 6-7	Depending on the cooling and heating load, the student design the duct system to the house
Week 8	Design the duct system for the building and select the fan for the duct system. Finding the operating point, power consumption and pressure loss of the fan.
Week 9	Design the piping system for the heating load of the house
Week 10	Select the pumping system, system and finding the operating point, power consumption and pressure loss of the pumps.
Week 11	Perform a calculation for the freezing time of the food
Week 12-13	Perform the refrigeration load for a given cold store
Week 14-15	Estimation the freezing load of the cold store

Prerequisite module		Semester	
Co-requisites module		Semester	

Module Aims, Learning Outcomes and Indicative Contents	
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims	22. Learning the design process of mechanical components, for different design considerations, such like strength, stiffness, and stability. 23. Transfer real life mechanical systems to analytical models and analyze them and deal with design codes and standards. 24. To be able to solve open-ended design problems, cope with decision making and satisfy competing objectives. 25. Use and integrate the fundamentals studied previously towards the goal of analyzing and designing mechanical components to achieve satisfactory levels of safety and life. 26. To improve competence in multi-axis stress analysis. 27. To obtain a knowledge in the use of the proper failure theories under steady and variable loadings. 28. To develop the design skills of mechanical components under steady and variable loadings.
Module Learning Outcomes	Upon completion of the course, students should be able to: 1. Apply basic design principles applicable to components as listed in the core content. 2. Conceptualise, design and calculate simple stresses in mechanical components. 3. Design and calculate working stress and factor of safety in mechanical components. 4. Design and calculate stresses in composite bars and thermal stresses in mechanical components. 5. Perform relevant and applicable calculations for torsional and bending stresses in mechanical components. 6. Identify the principal stresses and principal planes in mechanical components. 7. Apply theories of failure to achieve satisfactory levels of safety for mechanical components. 8. Design and calculate variable stresses and stress concentration in mechanical components. 9. Perform relevant and applicable calculations to design the shaft. 10. Perform relevant and applicable calculations to design the keys, splines and couplings. 11. Perform relevant and applicable calculations to design the riveted joints. 12. Perform relevant and applicable calculations to design the welded joints.

	13. Perform relevant and applicable calculations to design the pressure vessels. 14. Perform relevant and applicable calculations to design the power screws.
Indicative Contents	Indicative content includes the following: General Procedure in Machine Design, Classifications of Machine Design, Material Strength and Stiffness, Simple Stresses, Working Stress, Selection of Factor of Safety, Stresses in Composite Bars, Stresses due to Change in Temperature. [10 hrs] Torsional and Bending Stresses in Machine Parts, Shafts in Series and Parallel [3 hrs] Determination of Principal Stresses for a Member Subjected to Bi-axial Stress, Theories of Failure Under Static Load [5 hrs] Cyclic Stresses, Fatigue and Endurance Limit, Factor of Safety for Fatigue Loading, Theoretical Stress Concentration Factor, Fatigue Stress Concentration Factor, Combined Steady and Variable Stress [4 hrs] Material Used for Shafts, Design of Shafts, Shafts Subjected to Twisting Moment Only, Shafts Subjected to Bending Moment Only, Shafts Subjected to Combined Twisting Moment and Bending Moment, Shafts Subjected to Axial Load in addition to Combined Torsion and Bending Loads [4 hrs] Design of keys and Splines, Effect of Keyways, Types of Shafts Couplings [5 hrs] Riveted Joints, Failures of a Riveted Joint, Efficiency of a Riveted Joint, Design of Longitudinal Butt Joint for a Boiler, Design of Circumferential Lap Joint for a Boiler, Riveted Joint for Structural Use [5 hrs] Types of Welded Joints, Basic Weld Symbols, Strength of Transverse Fillet Welded Joints, Strength of Parallel Fillet Welded Joints [5 hrs] Classification of Pressure Vessels, Hoop and Longitudinal Stress, Spherical Shells, Compound Cylindrical Shells [4 hrs] Types of Screw Threads, Efficiency of Threaded Screws, Efficiency of Self-Locking Screws [3 hrs]

----------------------	--	----------	--

Module Aims, Learning Outcomes and Indicative Contents	
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	1. study the maintenance of all types of refrigeration system. 2. Introducing students to all the basic topics of this course, the theoretical side and the practical side. 3. Introduces theories and operations of heating and air conditioning system. Includes service, testing and repair of air conditioning, ventilation, and heater and engine cooling systems
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1. Describe the Refrigeration and Air Conditioning system and the principle of work inside Refrigeration and Air Conditioning workshop 2. The student can General Safety Practices and getting to know the Tools and equipment, Refrigeration and air conditioning systems strategies. 3. Diagnose air conditioning and heating failures and make the required repairs. 4. the student have ability to Refrigeration and air conditioning equipment installation, Inspection and welding of pipes , vacuum and charge, installation problems. 5. The student able to troubleshoot for central air conditioning systems, Refrigeration and Oil Chemistry and Management—Recovery, Recycling, Reclaiming, and Retrofitting 6. Study the Mechanical and Electrical troubleshooting of Refrigeration and air conditioning system and water chillers 7. Study the Conventional air conditioning system (mechanical and electrical components, features, installation, connection, commissioning, maintenance, and control. 8. Study the Compressors (types, applications, maintenance, assembly and dis assembly, test and commissioning). 9. Study the Evaporators ,Condensers, Expansion devices and air washer (types, applications, maintenance, assembly and dis assembly, test and commissioning). 10. Study Cooling tower (types, applications, maintenance, assembly and dis assembly, test and commissioning). 11. Pumps (types, applications, maintenance, assembly and dis assembly, test and commissioning).

	12. Refrigeration and air conditioning components cleaning by using chemical materials.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. 1. General Safety Practices 2. Tools and equipments 3. Refrigeration and air conditioning equipment classification 4. air conditioning and heating failures and make the required repairs. 5. Refrigeration and air conditioning equipment installation 6. Mechanical and Electrical troubleshooting 7. Conventional air condition system(mechanical and electrical components)

Delivery Plan (Weekly Syllabus) المنهاج الاسبوعي النظري	
Week	Material Covered
Week 1	General Safety Practices, Tools and equipment, Refrigeration and air conditioning systems strategies.Refrigeration and air conditioning equipment classification (types, applications, maintenance, control, mechanical and electrical parts).Test and commissioning Refrigeration and air conditioning equipment.
Week 2	Refrigeration and air conditioning equipment installation, tubing, welding, leak
Week 3	types of installation, mechanical and electrical connections, piping, Appropriate places selection, piping's and insulations assembly, air purge, vacuum and charge, installation problems
Week 4	Mollier's charts (drawing, point's determination, troubleshooting for central air conditioning systems, Refrigeration and Oil Chemistry and Management—Recovery, Recycling, Reclaiming, and Retrofitting
Week 5	Mechanical troubleshooting study of Refrigeration and air conditioning system and water chillers.
Week 6	Electrical troubleshooting study of Refrigeration and air conditioning system and water chillers.
Week 7	Conventional air condition system (mechanical and electrical components, features, installation, connection, commissioning, maintenance, and control.
Week 8	Compressors (types, applications, maintenance, assembly and dis assembly, test and commissioning).
Week 9	Evaporators and air washer (types, applications, maintenance, assembly and dis assembly, test and commissioning).
Week 10	Condensers (types, applications, maintenance, assembly and dis assembly, test and commissioning).
Week 11	Cooling tower (types, applications, maintenance, assembly and dis assembly, test and commissioning).
Week 12	Expansion devices (types, applications, maintenance, assembly and dis assembly, test and commissioning).
Week 13	Fans (types, applications, maintenance, assembly and dis assembly, test and commissioning).
Week 14	Pumps (types, applications, maintenance, assembly and dis assembly, test and commissioning).
Week 15	Refrigeration and air conditioning components cleaning by using chemical materials.

Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

Week	Material Covered
Week 1	Dismantling the commercial system knew the basic parts and accessories and isolate each part of it for other parts.
Week 2	Repair compressor through the dismantling of reciprocating compressor semi –hermetic of commercial system
Week 3	identify the parts and functions and the method of examination and then gathered and examined parts of the compressor and take all measures in order to examine the operation and performance.
Week 4	Maintenance of air cooled condenser system for commercial and examination of the leak and treatment. Cleaning of the inside and outside and sweep the fins also work includes everything related to the fans for the condenser. Maintenance of water-cooled condenser system for commercial and examination of the leak and treatment. Cleaning of the interior and exterior work includes mechanical and chemical cleaning, as well as the pump and piping for the condenser
Week 5	Maintenance - evaporator system for commercial and leakage of examination and treatment. Cleaning of the inside and outside and sweep the fins also work includes everything related to the fans for the evaporator
Week 6	Dismantling expansion valve (used for different types of commercial systems) and checked and calibrated and cleaned.
Week 7	Maintenance of electrical accessories for commercial and test it (power and control circuit. Connect the electrical connections of the power and control circuits and test the connections.
Week 8	Conduct a process of checking the leak and add oil and make the process of charging and discharging of the gas by using modern equipment not impact on the environment. Checking the final inspection of the system and the first to hold the operation of the system to ensure the safety of the electrical and mechanical connection.
Week 9	Maintenance of mechanical and electrical axial fans and Accessories. Maintenance of mechanical and electrical centrifugal fans and Accessories.
Week 10	Maintenance of water pumps (the dismantling of the pump and the maintenance of internal parts and then assembled) adjust the straightness of the pump and the electric motor.
Week 11	Maintenance of all extensions of piping system (disassembly of the different types of valves to get to know their parts and re- assembled and tested) and examined and operated.
Week 12	Maintenance of air handling unit through the dismantling of parts and inspection and lubrication and then re- connect and straighter transmission belt and pulleys.
Week 13	Maintenance of cooling tower (fans –ball bearing- tank-nozzles-piping-pill and straighter transmission belt and pulleys).
Week 14	Maintenance of an air vehicle air conditioner and includes cleaning -Maintenance – components vacuum and churcing with modern equipment that do not adversely affect the environment.

Week 15	operating and inspection the vehicle air conditioner system.

Air Conditioning Systems Drawing

Module Information معلومات المادة الدراسية

Module Title	Air Conditioning Systems Drawing			Module Delivery	
Module Type	C			☐ Theory ☒ Lecture ☒ Lab ☐ Tutorial ☐ Practical ☐ Seminar	
Module Code	MPAC308				
ECTS Credits	8				
SWL (hr/sem)	200				
Module Level		3	Semester of Delivery		6
Administering Department		Mechanical Power Eng. Dep.	College	TCB	

Relation with other Modules العلاقة مع المواد الدراسية الأخرى			
Prerequisite module		Semester	
Co-requisites module	None	Semester	

Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	1. To enable and qualify the student to understand the architectural plans and their sections. 2. To draw and understand the mechanical layouts of the ducting network for ventilation. 3. To provide the ability to draw the piping network of the central air conditioning systems with all the necessary accessories of valves, fittings and sensors. 4. To draw the detail drawings of the air conditioning devices of fan coil units, chillers, boilers, air handling units, and cooling towers. 5. To design VRF systems for selective AC companies. 6. To understand the electrical and control diagrams of the air conditioning systems.
Module Learning Outcomes	29. Making site survey and drawing the architectural plans. 30. Estimate the cooling load of buildings by Rule of Thumb method.

مخرجات التعلم للمادة الدراسية	31. Estimate the required ventilation of buildings by Rule of Thumb method. 32. Using the Duct Sizer software to design the ducting network. 33. Drawing the ducting network by AutoCAD MEP or Revit software. 34. Selection of chillers, boilers, AHU's, package units, fan coils and cooling towers of deferent brand. 35. Using the Pipe Sizer software to design the piping network of the air conditioning system. 36. Drawing the piping network by AutoCAD MEP or Revit software. 37. Designing the VRV/VRF system by the selection software of some manufacturer brands.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. Part A – Drawing Plans Walls, columns, doors, windows, stairs, shafts, elevation. [9 hrs] Part B – Ducting Drawing Load estimation, specify ventilation, units' selection, duct design and drawing. [30 hrs] Part C – Piping Drawing Chillers, boilers, pumps selection, piping design and drawing, VRF system drawing. [30 hrs] Part D – Electrical Drawing Chillers, boilers, pumps, VRF system electrical drawing. [21 hrs]

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises. This will be achieved through classes, interactive tutorials and by considering some simple real projects as well as site visiting for finished and ongoing projects.

Delivery Plan (Weekly Syllabus)
المنهاج الاسبوعي النظري محتوى كل اسبوع يجب ان يغطي الوقت المحدد

Week	Material Covered
Week 1	D.C motors, construction, commutator, types of D.C motors
Week 2	Starting of D.C motor, starter connection, torque of D.C motors
Week 3	Single phase induction motor, split-phase, capacitor-start, shaded-pole type
Week 4	3-phase induction motor , construction , synch. Speed, slip .
Week 5	Starting of 3-phase induction motor, star-delta method, step down transformer
Week 6	Instruments and measurements, ammeters, voltmeter, ohmmeter, kw - h meters .
Week 7	Contactors, relays, timers .. Thermal overload, starter (contactor +timer)
Week 8	Fuse, circuit breakers, types, choice
Week 9	Diode, V-I characteristic, half –wave rectifier
Week 10	Full-wave rectifier, bridge and center-top transformer rectifier
Week 11	Transistor, construction, types
Week 12	Saturation, active, break-down region and cutoff regions
Week 13	Transistor as amplifier and Transistor as electronic switch.
Week 14	Diac – Traic , characteristics applications with SCR .
Week 15	Operational amplifier 741.

Delivery Plan (Weekly Lab. Syllabus)
المنهاج الاسبوعي للمختبر

Week	Material Covered
Week 1	Basic wiring diagram for electrical measurements
Week 2	Test of current, voltage and solid state relay
Week 3	Start-up compressor with solid state relay
Week 4	Start-up compressor with current relay
Week 5	Star delta starter
Week 6	Simulation of block for refrigerant , notice the effects

Week 7	Simulation of valve damage, notice the effects
Week 8	Dismantling of induction motor
Week 9	Diode characteristics
Week 10	Diode characteristics
Week 11	Half wave rectifier
Week 12	Full wave rectifier
Week 13	Full wave rectifier with filter
Week 14	Diode limiters
Week 15	Zener diode

Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	4. Study the type of all types of refrigeration system. 5. This course provides information on air conditioning system design and gives a good understanding of the techniques, concepts, and methods of the HVAC system design. 6. Introduces theories and operations of heating and air conditioning system. Includes design of HVAC system
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1- Learn how to select the suitable air terminal device and the indoor air distribution behavior 2-Study and learn some important concepts of air distribution such as duct layout, Fan, AHU, etc. 3-Work on the advanced process in the HVAC system 4-Learn about the different types of air conditioning system 5-Learn some rules of piping systems and accessories
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. 8. Air distribution systems 9. Room air distribution, conditioned room air distribution 10. Refrigeration and air conditioning equipment classification 11. Piping's systems and accessories. 12. Advanced applications on psychometric charts. 13. Conventional air condition system(mechanical and electrical components)

Delivery Plan (Weekly Syllabus) المنهاج الاسبوعي النظري	
Week	Material Covered
Week 1	Air distribution systems, zoning, Air –conditioning layout systems.
Week 2	Room air distribution, conditioned room air distribution systems, room air distribution requirements, air outlets (types) and selection. Air –handling units, fan-coil units (components and selection), system resistance in series and parallel.
Week 3	Fans (types ,designs ,selection ,calculation and connection)
Week 4	Air filtration (types, application, selection and its relations with conditioned room function. The noise in air conditioning systems. (Sources and treatments by using ducts silencers and plenum), air outlet selection with recommended noise.
Week 5	Advanced applications on psychometric charts.
Week 6	Advanced applications on psychometric charts.

Week 7	Piping's systems and accessories (open and closed system), (two, three, four pipe system) comparative study and design and applications.
Week 8	Evaporative cooling systems, application and design of (air cooler, cooling tower, and air washers), psychometric chart. Air conditioning systems (types and selection) and its relation with occupant's activities..
Week 9	All air systems, features, advantages, disadvantages, comparative study with other systems, and psychometric chart.
Week 10	Single zone system (variable volume constant temperature and variable temperature constant volume), comparative study (cost and performance), psychometric chart.
Week 11	Dual conduit system, multi zone system comparative study, psychometric chart. Air –water systems (types, features, advantages, disadvantages, comparative study with other systems, psychometric chart.
Week 12	Induction unit systems (features, types, advantages and disadvantages). All –water systems, advantages, disadvantages, performance and applications.
Week 13	Fan –coil unit systems ,and primary air and fan –coil system (comparative study) Dx – systems, package system, and applications.
Week 14	Energy conservation in air conditioning systems. Heat pump system for air conditioning system.
Week 15	Evaluations and commercial analysis for air conditioning systems.

Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims	1- Introduce the student to the basic processes of power cycles. 2- Identifying the properties of steam from tables and the processes that take place on the steam power plants cycle. 3- Learn about the different parts of the steam power plants and how it working. 4- Learn about the calculation the performance of each part of the steam power plants and the accessories.
Module Learning Outcomes	Upon completion of the course, students should be able to: 1- The student will be able to complete basic operations calculations on the steams cycles. 2- The student will be able to understand the thermal processes.

	3- The student will be able to understand all types of boilers and fuels. 4- The student will be able to understand and calculate all performance which used in power plants.
Indicative Contents	Indicative content includes the following. *In the fourth week, outside the students' commitments, a scientific trip to a steam station (1) to see the parts of the system and how it works in reality, and to make a report [8 hrs]. *In the eighth week, outside the students' commitments, a scientific trip to a gas power station (1) to see the parts of the system and how it works in reality, and to make a report .[8 hrs] *In the Twelfth week, outside the students' commitments, a scientific trip to a steam station (2) to see the parts of the system and how it works in reality, and to make a report .[8 hrs] *In the Fifteenth week, outside the students' commitments, a scientific trip to a thermal machinery repair plant to see the parts of the system and how it works in reality, Or showing scientific films about repairing thermal machines and steam turbines and to make a report .[8hrs]

Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري محتوى كل اسبوع يجب ان يغطي الوقت المحدد

Week	Subject
1	Introduction to power cycles and main equations in thermodynamics..
2	Power Plant Steam Cycles, Main Cycles.
3	Carnot cycle and its efficiency and all performance.
4	Steam table and its calculations.
5	Ideal Rankine cycle and colocations its performance.
6	Reheat cycle.
7	Regenerative cycle with open feed water heater.
8	Regenerative cycle with closed feed water heater.
9	Introduction to Heat Exchangers, Theoretical Principles, Parallel Flow H.E., Counter Flow H.E, Cross Flow H.E, The Log Mean Temperature Difference Method, The NTU Method, Shell and Tubes H.E., Condensing, Evaporation. .
10	Combustion and Fuels, Complete and Incomplete Combustion, Correct Air/Fuel Ratio, Access Air Supplied, Heat Generation, Boiler Efficiency, pinch principle.
11	Steam Boilers, Kinds, Burners, Air Preheated, Preheated and Superheated, Combustion and Fuels, Complete and Incomplete Combustion, Correct Air/Fuel Ratio, Access Air Supplied, Heat Generation, Boiler Efficiency, pinch principle.
12	Steam Nozzles, Applications, Steam Expansion, Discharge, Velocity of Steam Through Nozzles, Values of Critical Pressure, Diameters of Throat and Exit for Maximum.
13	Steam Condensers, Kinds, Direct Contact Condensers, Surface Condenser, Design and Manufacturing.
14	Steam Turbines, The Kinds, Impulse Turbine, Blades Efficiency, Reaction Turbine, Reaction Ratio, Installation, Multi Stage Blades,
15	The Pumps, Kinds of Pumps, System Characteristics, Pumps Characteristics, Matching Pumps to System Characteristics, Operation of Pumps in series and Parallel, Performance of the Condensers. Applications

Delivery Plan (Weekly Lab. Syllabus) المنهاج الاسبوعي للمختبر	
Week	Material Covered
Week 1	Feed water treatments .
Week 2	Fuel .
Week 3	The burner.
Week 4	The boiler.
Week 5	The quality calculation.
Week 6	The condense system part 1.
Week 7	The condense system part 2.
Week 8	The efficiency calculation for cycle.
Week 9	The turbine .
Week 10	The efficiency of the turbine .
Week 11	Bryton cycle .
Week 12	Efficiency of the Bryton cycle.
Week 13	Centrifugal pump.
Week 14	Axial pump.
Week 15	The effectiveness of the heat exchanger.

Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	AutoCAD 3d course teaches students to create basic 2D and 3D drawings using drawing and editing tools, organizes drawing objects on solids, basic dimensions, and prepares to plot. This course is designed for Mechanical Engineers.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	AutoCAD 3D certificate goal is to educate individuals on extra-advanced functions, the strategy, how to design and model items in the 3D design software program, enveloping surface areas, and solids in visualizing engineering designs.

Indicative Contents المحتويات الإرشادية	Indicative content includes the following. Part 1 – 3d solids Drawing the basic components of 3d solids in space. Part 2 – 3d operations Enable to make operations on the 3d solids. Part 3 – Solid editing Enable to editing on 3d solids, faces and edges. Part 4- User coordinate system UCS Types of UCS and their applications on 3d solids. Part 5- Advanced 3d commands (Extrude, revolve, sweep and loft), 2d drawings and UCS . Part 6 – Surface Drawing different types of surfaces in space.

Delivery Plan (Weekly Syllabus) المنهاج الاسبوعي النظري	
Week	Material Covered
Week 1	Introduction to AutoCAD -3D, workspace, visual style, 3d views, view ports, right hand rule, world coordinate and user coordinate systems and types of coordinate systems. 3D solids (box, wedge and cylinder).
Week 2	3D solids (cone and tours). 3D solids (sphere and pyramid).
Week 3	Examples to 3D solids. Basic solid editing (union, subtract and intersect) with examples.
Week 4	Fillet and chamfer with applied examples. 3D operations (3d move and 3d rotate) with examples.
Week 5	3D operations (3d align and 3d mirror) with examples. 3D operations (3d array and slice) with examples.
Week 6	More applied examples. User coordinate system (origion, face and objects) with examples.
Week 7	User coordinate system (view, world ,x-y-z) with examples. User coordinate system (z-axis and 3 points) with examples.
Week 8	Advanced 3d commands (extrude and loft) with examples.
Week 9	Advanced 3d commands (revolve, sweep) with examples. Advanced 3d commands (presspull and section plane) with examples.
Week 10	Advanced solid editing/face (extrude, move,rotate and offest).
Week 11	Advanced solid editing/face (taper, delete, copy, color, material, undo and exit).
Week 12	Applied examples.

	Advanced solid editing/edge (copy and color).
Week 13	Advanced solid editing/body (imprint, separate, shell, clean and check).
Week 14	Surface (box, cone, dome and mesh). surface (pyramid and sphere)
Week 15	surface (torus and wedge) with examples.
Week 16	The preparatory week before the final Exam

Delivery Plan (Weekly Lab. Syllabus) المنهاج الاسبوعي للمختبر	
Week	Material Covered
Week 1	examples on coordinate systems
Week 2	examples on box, wedge and cylinder
Week 3	examples on cone and tours examples on sphere and pyramid
Week 4	applied examples examples on asic solid editing
Week 5	examples on fillet and chamfer examples on 3d move and 3d rotate
Week 6	examples on 3d align and 3d mirror examples on 3d array and slice
Week 7	applied examples on ucs
Week 8	applied examples on ucs
Week 9	examples on extrude and loft
Week 10	examples on revolve and sweep presspull and section plane
Week 11	examples on advanced solid editing/face (extrude, move,rotate and offest

Week 12	Advanced solid editing/face (taper, delete, copy, color,).material, undo and exit
Week 13	Applied examples.
Week 14	Examples
Week 15	examples on 3d surface Surface (box, cone, dome and mesh)

Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	Providing the engineer with information related to the management of the industrial unit (productivity) and its structural composition and finding the optimal solution using known methods in operations research and other engineering mathematical methods.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	Achieving the objectives of the industrial unit with the highest possible efficiency and maximum profitability and at the lowest cost, through the optimal use of production resources (workers, machines, and raw materials), maintenance and warehousing operations, then introducing the student to the system and economics of quality control and its functions and the principles of statistics and probability distributions.
Indicative Contents المحتويات الإرشادية	

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	1. Quizzes and tests throughout the semester to check understanding and knowledge 2. Examinations, written, that assess learners' understanding of concepts, principles, and theories related to Industrial Engineering 3. Peer evaluation and feedback tools used as part of group projects or reciprocal feedback assignments. 4. Assignments and essays used to assess learners' comprehension of theoretical

concepts.

5. Presentation and demonstration of acquired knowledge in real-world scenarios.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims	41. Enhance the students' knowledge of the principles of vapor compression refrigeration systems and its analysis. 42. Provide the students the basic design of all components for vapor refrigeration system 43. Studying types of refrigeration units and cryogenic refrigeration.
Module Learning Outcomes	Upon completion of the course, students should be able to: 15. To understand the principles of work of refrigeration systems, and main advantages, disadvantages and application of each them. 16. To investigate the general design of condenser, evaporator, expansion device and cooling tower 17. To understand the basic calculations of the all type of refrigeration systems.
Indicative Contents	Indicative content includes the following: Condensers and Evaporators: Condensers and evaporators as heat exchangers, overall heat transfer coefficients, heat transfer and pressure drop for the fluid flow in heat exchanger tubes and shell. Extended surfaces, Heat transfer and pressure drop for air side. Required condensing capacity, condensing coefficient, fouling factor, de-super heating, condenser design, Wilson plots, air and non-condensable gases. Evaporators, Boiling in the shell, boiling inside tube, evaporators performance, pressure drop in tubes, frost. [10 hrs] Expansion devices: Purpose and types of expansion devices, capillary tube, selection of capillary tube ,analytical computation of pressure drop in capillary tube, increment length, choked flow graphical method of capillary tube selection ,Constant pressure expansion valve, controlling of super-heating in thermostatic expansion valve [3 hrs] Vapor compression refrigeration system Analysis: balance point and system simulation, reciprocating compressors, condenser performance, condensing unit system mathematical and graphical analysis, evaporator performance, performance of complete system graphical and mathematical analysis, some performance trends, the expansion devices, sensitivity analysis. [5 hrs] Cooling towers and evaporative condensers: Heat rejected to atmosphere, cooling towers, analysis of counter flow cooling tower, stepwise integration, acceptance test, predicting outlet conditions from tower, air conditions through tower, evaporative condensers, when using a cooling tower and evaporative

	condensers. [4 hrs] Absorption refrigeration system: relation between vapour compression and absorption refrigeration units, the absorption refrigeration system, temperature and concentration properties of LiBr-water solution, calculations of mass flow rates in the absorption cycle, enthalpy of LiBr-water solutions, thermal analysis of simple cycle, absorption cycle with heat exchanger, crystallization, capacity control, aqua-ammonia system . [4 hrs] Adsorption system : the relation between adsorption and absorption, absorption and vapour compression cycle, the analysis of adsorption system, mathematical analysis of the adsorption system . Steam jet refrigeration: system components, analysis of steam jet refrigeration system, approximation analysis, equilibrium concentration. [5 hrs] Air refrigeration system : the working principle of the cycle, design considerations, atmosphere temperature, humidity and pressure, load calculation, refrigeration, heating, temperature control, ventilation, pressure control of zone, types of air system. [5 hrs] Thermoelectric refrigeration: working principle, types of thermoelectric refrigeration systems, electro-acoustic refrigeration, working principle, types. [5 hrs] Cryogenic and liquefaction of gases: Cryogenic, Joule-Thomson effect, air liquefaction by Hopson system (Joule-Thomson expansion). Temperature entropy diagram for air, calculation of work required for gas compression , Claude system, cascade system, general consideration for gas liquefaction, Hydrogen , Pre-Cooling system for air liquefaction, Helium [4 hrs] Vortex tube: Types and working principle. Heat Pipe: Types and working principle. [3 hrs]

Module Type	C	☐ Theory ☒ Lecture
Module Code	MPAC406	

ECTS Credits	10	☒ Lab ☐ Tutorial ☐ Practical ☐ Seminar	
SWL (hr/sem)	250		
Module Level	4	Semester of Delivery	8
Administering Department	Mechanical Power Eng. Dep.	College	TCB

Relation with other Modules العلاقة مع المواد الدراسية الأخرى			
Prerequisite module		Semester	
Co-requisites module		Semester	
Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية			
Module Aims أهداف المادة الدراسية	1. Provide the students the basic knowledge of all sources of renewable energies. 2. Provide the students with the fundamentals of the different power generation systems working based on renewable energies. 3. Provide the students the experimental training about the different renewable energy systems.		
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1. To understand the sources of renewable energies and the main advantages and disadvantages of each of them. 2. To understand the effects of renewable energy on the environment. 3. To understand the principles of work of renewable energy systems. 4. To investigate the general design of renewable energy systems. 5. To understand the basic calculations of renewable energy sources and systems.		
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. Part 1 – Solar energy The principles of solar energy with the solar systems of solar water heating, solar air heating, solar thermal power plants, solar water desalination, and solar dryer. [30 hrs] Part 2 - Photovoltaic Principles of solar cells and photovoltaic modules. Effects of solar radiation and ambient temperature on the photovoltaic systems. Types of photovoltaic		

	systems with different applications. Power outputs of the photovoltaic systems. [30 hrs] Part 3 – Wind energy Wind energy and wind turbines. Classifications and types of wind turbines. Components of wind turbines. Types of wind farms and performance of the wind turbines. [10 hrs] Part 4- Water energy Hydro energy with hydro turbines. Types of hydro power plant. Ocean energy with different power plants. Tidal energy and tidal power plants. [10 hrs] Part 5- Geothermal energy Types and applications of geothermal energy, geothermal heating systems, and geothermal power plants. [10 hrs] Part 6 – Bioenergy Types and applications of bioenergy, biomass biogas and biofuel. [10 hrs]

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	Type something like: The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

Student Workload (SWL) الحمل الدراسي للطلاب

Summative assessment	Midterm Exam	2 hr	10% (10)	7	LO # 1-3
	Final Exam	2hr	50% (50)	16	All
Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus) المنهاج الاسبوعي النظري	
Week	Material Covered
Week 1	General introduction to Energy. Introduction to renewable energy. Renewable energy resources and application. Renewable energy and environmental problems (Acid rain, Ozone layer depletion, Global climate change, Nuclear hazards).
Week 2	The sun. Reckoning of time (the equation of time and longitude correction). Solar angles (declination, hour angle, solar altitude angle, solar azimuth angle, sunrise and sunset times and day length, incidence angle). Calculations of solar radiation (Extraterrestrial solar radiation, Atmospheric attenuation. Terrestrial irradiation. Total radiation on the surface).
Week 3	Solar energy collectors. Stationary collectors (Flat plate collectors, Compound parabolic collectors, Evacuated tube collectors). Sun-tracking concentrating collectors (Parabolic trough collectors, Fresnel collectors, Parabolic dish reflectors, Heliostat field collectors).
Week 4	Solar water heating systems. Passive systems (Thermo siphon systems, Integrated collector storage). Active systems (Direct circulation systems, Indirect water heating systems, Pool heating systems).
Week 5	Heat storage systems (Air system thermal storage, Liquid system thermal storage, and thermal analysis of storage systems). Module and array design. Differential temperature controller, Placement of sensors.
Week 6	Heat storage systems (Air system thermal storage, Liquid system thermal storage, and thermal analysis of storage systems). Module and array design. Differential temperature controller, Placement of sensors.
Week 7	Industrial process heat (Solar industrial air and water systems, Solar steam generation systems). Chemistry applications (Reforming of fuels, Fuel cells, Materials processing, Solar detoxification). Solar dryers (Active solar energy dryers, Passive solar energy dryers. Greenhouses and greenhouse materials.
Week 8	Solar desalination systems. Desalination processes. Direct collection systems. Classification of solar water desalination systems. Performance of solar stills. Solar cells, Structure of photovoltaic System, Design of photovoltaic system. Hybrid photovoltaic /thermal systems and applications.
Week 9	Solar Thermal Power Systems (Parabolic trough collector systems, Power tower systems,

	Dish systems, Solar ponds).
Week 10	Introduction to wind energy. Power available in the energy. Wind turbine power and torque. Classification of Wind turbine (Horizontal axis Wind turbine, Vertical axis Wind turbine). Aerodynamics of Wind turbine (Airfoil, Aerodynamic theories). Characteristics of wind rotors (Rotor design, Rotor performance). Analysis of wind data
Week 11	Wind energy conversion systems. Wind electric generators (Tower, Rotor, Gearbox, Power regulation, Safety brakes, Generator). Wind farms, Offshore wind farms. Wind pumps. Wind water heater. Performance of wind energy conversion system. Power curve of wind turbine. Capacity factor.
Week 12	Introduction to water cycle. Water turbines. Hydropower plants (Run - of - River power plants, Storage power plants, Pumped - storage power plants).
Week 13	Introduction to bioenergy (biomass, biogas, biofuel). Biomass heating (Wood as a fuel, Fireplaces and closed wood burning stoves, Wood pellet heating). Biomass heat and power plants.
Week 14	Introduction to geothermal energy. Geothermal plants (Geothermal heat plants, Geothermal power plants), Geothermal heat pumps.
Week 15	Tidal energy. Tidal power plants. Wave energy. Wave power plants.
Week 16	The preparatory week before the final Exam

Delivery Plan (Weekly Lab. Syllabus) المنهاج الاسبوعي للمختبر	
Week	Material Covered
Week 1	Measurement devices and safety tools
Week 2	Solar angles
Week 3	Sun path and shading
Week 4	Solar simulators
Week 5	solar water heating systems
Week 6	solar air heating system
Week 7	Solar dryer
Week 8	Solar water desalination
Week 9	Solar concentrators

Week 10	Performance of photovoltaic modules	
Week 11	Performance of photovoltaic systems	
Week 12	Performance of photovoltaic thermal system	
Week 13	Wind turbines	
Week 14	Hydro energy	
Week 15	Geothermal systems

Week 2	Cause and effect clauses, State verbs, vocabulary and comprehension
Week 3	Academic writing (2), writing technical report
Week 4	Types of sentences in English (1), vocabulary and comprehension
Week 5	Types of sentences in English (2), vocabulary and comprehension
Week 6	Result clauses, vocabulary and comprehension
Week 7	conjunctions, vocabulary and comprehension
Week 8	Punctuation, vocabulary and comprehension
Week 9	Writing CV, passive voice, vocabulary and comprehension
Week 10	Technical writing, technical sentences, vocabulary and comprehension
Week 11	Writing essays, vocabulary and comprehension
Week 12	Writing summary and abstract
Week 13	Paraphrasing
Week 14	General Revision
Week 15	Final Exam

Learning and Teaching Resources مصادر التعلم والتدريس		
	Text	Available in the Library?
Required Texts	Headway plus for post intermediate	Yes
Recommended Texts	Any Grammar and comprehension for technical learning and academic writing texts.	No

MODULE DESCRIPTION FORM

نموذج وصف المادة الدراسية

Module Information معلومات المادة الدراسية		
Module Title	Control and Measurements	Module Delivery

Module Type	C	☐ Theory ☒ Lecture ☒ Lab ☐ Tutorial ☐ Practical ☐ Seminar	
Module Code	MPAC409		
ECTS Credits	6		
SWL (hr/sem)	150		
Module Level	4	Semester of Delivery	8
Administering Department	Mechanical Power Eng. Dep.	College	TCB

Relation with other Modules العلاقة مع المواد الدراسية الأخرى			
Prerequisite module		Semester	L3,S2
Co-requisites module		Semester	

Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	Course Objectives: as an example 23. Students become familiar with various types of sensors which have been used in HVAC control systems. 24. Knowing the aims of the control systems and their importance in the HVAC. 25. Providing enough details to understand each element in the HVAC control system. 26. Providing a more in-depth understanding of troubleshooting HVAC control systems. 27. The student will be able to follow and read wiring diagrams.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	Outcomes: as an example 1. Applying fundamentals of control systems. 2. Reading, drawing, and interpreting HVAC control system diagrams. 3. Select the HVAC control systems. 4. Controlling required indoor air quality and thermal comfort conditions. 5. Applying knowledge of how energy savings can be achieved by HVAC control systems. 6. Identifying problems with the HVAC control systems.

Indicative Contents المحتويات الإرشادية	Control engineering is applied in many different fields and at many different levels. The components of all control systems are diverse in nature and may include electrical, electronic, mechanical, thermal, and fluidic devices. The aims behind using control systems in HVAC are: 1. Maintain thermal comfort conditions. 2. Maintain optimum indoor air quality. 3. Reduce energy use. 4. Safe plant operation. 5. To reduce manpower costs. 6. Identify maintenance problems. 7. Efficient plant operation to match the load. 8. Monitoring system performance.

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	Assessment is based on hand-in assignments, written exams, Case studies, Quizzes, report presentations, Practical testing

Student Workload (SWL) الحمل الدراسي للطلاب			
Structured SWL (h/sem) الحمل الدراسي المنتظم للطلاب خلال الفصل	116	Structured SWL (h/w) الحمل الدراسي المنتظم للطلاب أسبوعياً	8
Unstructured SWL (h/sem) الحمل الدراسي غير المنتظم للطلاب خلال الفصل	34	Unstructured SWL (h/w) الحمل الدراسي غير المنتظم للطلاب أسبوعياً	4
Total SWL (h/sem) الحمل الدراسي الكلي للطلاب خلال الفصل	150		

Module Evaluation تقييم المادة الدراسية					
As		Time/Number	Weight (Marks)	Week Due	Relevant Learning Outcome
Formative	Quizzes	4	20% (10)	3,6,9,12	All

assessment	Assignments	2	5% (10)	6,12	All
	Projects / Lab.	1	10% (10)	Continuous	
	Report	1	5% (10)	14	All
Summative assessment	Midterm Exam	2 hr	10% (10)	8	All
	Final Exam	3hr	50% (50)	16	All
Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus) المنهاج الاسبوعي النظري	
Week	Material Covered
Week 1	Fundamentals of control systems and measurements include principles, elements, purposes for HVAC systems, open and close loop control, energy sources, accuracy, the standard of measurements, and description of measurement devices.
Week 2	Controlled variables, sensors, time response, measurements, feedback, and Control actions include two position controllers, proportional controllers, proportional plus integral controllers, and proportional plus integral plus derivative controllers. Control devices, valves, dampers, relays thermostats, humidistats, and pressure transducers.
Week 3	Pneumatic control systems and their sensors. Errors in Measurements: Types of errors and Statistical Analysis.
Week 4	Principles of electrical control systems include their elements, electrical symbols and wiring drawings, control, and power circuit diagrams.
Week 5	Electrical control of air handling units, variable speed controller, and multispeed staters.
Week 6	Fundamentals of electronic control systems include their elements, sensors, transducers, amplifiers, and Wheatstone bridge.
Week 7	Digital Direct Control (DDC), components and operating cycle, microprocessor, pneumatic to electronic control system,
Week 8	Input and output signals – digital and analog, system network controller.
Week 9	Complete control systems, single-zone systems, single-zone AHU; minimum outside air, single-zone AHU; economy cycle outside air, multizone air handling systems
Week 10	Single-zone humidity control, static pressure control of outside air, preheat with outside air thermostat
Week 11	Enthalpy control, outside air; enthalpy economy cycle, economizer control
Week 12	Energy savings in HVAC systems, HVAC energy efficiency ratio (EER), energy-efficient heating and cooling systems, seasonal energy efficiency ratio (SEER), and energy management system (EMS).
Week 13	PLCs, types of PLCs, study hardware and software used in PLC.
Week 14	Implementation of logic gates, implementation of On-Delay Timer,
Week 15	Troubleshooting HVAC control systems.
Week 16	Preparing for the final exam

Delivery Plan (Weekly Lab. Syllabus) المنهاج الاسبوعي للمختبر		
Week	Material Covered	
Week 1	Workplace safety rules, knowing about the instruments, tools, and supplies.	
Week 2	Measurements of controlled variables (temperature, humidity, pressure, etc.).	
Week 3	Domestic and commercial refrigerator and freezer controls.	
Week 4	Ice maker controls and water cooler controls, vendor machine controls.	
Week 5	Defrost control, defrost timers, wiring diagram of the evaporator defrosting, hot gas defrosting, and hot gas bypass.	
Week 6	Compressor protection devices, oil pressure controls, low- and high-pressure controls, and overload controls.	
Week 7	Air conditioning power and control circuits and reversing valves.	
Week 8	Residential central air conditioning control systems,	
Week 9	Reversing the rotating direction in 3-phase AC. Motor (power and control circuit).	
	Reversing the rotating direction in 3-phase AC. Motor by using PLC.	
Week 10	Star-delta starter (power and control circuit). Star-delta starter (power and control circuit) by using PLC.	
Week 11	Chilled controls.	
Week 12	Chilled controls by using PLC.	
Week 13	Control systems of air handling units (AHU).	
Week 14	Control systems of air handling units (AHU) by using PLC.	
Week 15	Troubleshooting.	
Learning and Teaching Resources مصادر التعلم والتدريس		
	Text	Available in the Library?
Required Texts	Haines, Roger W., and Douglas C. <i>Control heating, ventilating, and air conditioning systems</i> . Springer Science & Business Media, 2006.	Yes
Recommended Texts	Montgomery, Ross, and Robert McDowall. <i>Fundamentals of HVAC control systems</i> . Elsevier, 2008	Yes
Websites
